

Automating Production of Cross Media Content for Multi-channel Distribution

www.AXMEDIS.org

DE8.1.1

Content for Test Cases and Validation

Version: 2.3
Date: 07/09/2005
Responsible: ILABS (d.fuschi@giuntlabs.it)

Project Number: IST-2001-37168
Project Title: Automating Production of Cross Media Content for Multichannel Distribution
Deliverable Type: Other
Visible to User Groups: Yes
Visible to Affiliated: Yes
Visible to the Public: Yes.

Deliverable Number: DE8.1.1
Contractual Date of Delivery: 31/08/05
Actual Date of Delivery: 07/09/05
Title of Deliverable: AXMEDIS Content for Test Cases and Validation
Work-Package contributing to the Deliverable: WP8
Task contributing to the Deliverable: WP8.2, WP2, ...
Nature of the Deliverable: Other
Author(s): ILABS, AFI, SEJER, DIPITA, XIM, FUPF, ANSC, DSI, FHGIGD

Abstract:
This document is a supporting document for deliverable DE8.1.1 holding the set of contents available for the experimental phase of the project. Aim of the doc is to provide description and reference to provided content.

Keyword List:
Content, Test Cases, Validation, Metrics, Results

1 Executive Summary and Report Scope (ILABS)

AXMEDIS content partners (OD2, ANSC, ILABS, SEJER, AFI, etc.) have relevant amount of digital content to be used in the project.

In other deliverables have been described the overall set of requirements addressed and the foreseen test cases that will allow proper validation of achieved results. In this latter document (DE2.2.1) have been pointed out needs in terms of dataset used. What reported there is basic information while the present document describes in detail the content to be used for the test case development and validation phase. It has been therefore decided to adopt as a starting point the basic information reported in DE2.2.1; complementary information can be found in DE3.1.3, DE8.2.1, DE8.4.1 and 8.4.3. Activities related and impacting on this document are the one of the following Task.

WP8.1 Content production for research test cases and validation -- responsible ILABS -- The main goals of this WP are the production and the assessment of test sets for assessing and validating the following algorithms and processes. The following test cases will be produced in their first version in the first 18 months: fingerprinting content files, Audio beat tracking of polyphonic production for music pieces synchronization, Indexing cross media content, Analysis of multiple DRM rules enforced into the object, Compositional algorithms for creating aggregated content objects, Formatting algorithms for producing complex formatted objects to be directly distributed towards the final users, Profiling end –users and distributors, Sharing simple and complex objects on the AXEPTool, Protecting AXMEDIS content object and distributing them, Algorithms for direct translation of multilingual content , transcoding content, Production and usage of complex technical queries in the AXEPTool, Conversion of content in other formats, scaling, decoding, etc. Metadata comparison and integration, different catalogues in different formats and containing/including different types of content: images, video, audio, score, lyrics, orchestrations, etc The production of this content for test cases will start since the beginning of the research activity and in according with the planned results of that activity. The content partners such as ANSC, SEJER, ILABS, OD2, XIM, etc., agree in supporting the project producing this content under request. Other details: guidelines for the content production of test cases, form for modelling a content for validation and test cases, request form and presentation form, production and integration of requested content for validation and test

1.1 Responsibilities

ILABS is primary responsible for the completion of the present document, yet all content owning partners are responsible for providing the required contributions including content samples (in terms of aspect, description and metadata). Technical partners are responsible of document revision in terms of coherence with expected supported formats. Document sections responsible are reported in the section title within brackets. When a section, or subsection, has no explicit responsible is assumed that is in charge to the responsible of the previous one or is a general one to which all partners shall contribute. Given the nature of the deliverable DE8.1.1 (as stated in the TA it is of “other” nature), this document has to be intended as a reference to content stored and available for the sake of project development, evaluation and exploitation.

2 Test case brief presentation (FUPF)

In DE2.2.1 test cases have been extensively explained, structured and described. The adopted format is reported hereafter for the sake of reference. From the table is evident that for each test case there is a data set to be used in order to ensure that performed test activities are consistent and can provide useful information on the tested functionalities. The present document is aimed to help in identifying and locating the actual content comprised in any of the mentioned data sets and therefore has been structured to map onto the test case description deliverable. For any further clarification related to test cases please refer to DE2.2.1.

During project development, test cases should be revised, which could imply that the data sets are also improved and/or modified.

Test Case Structure

TCId	Unique identifier of the test case
Test case	Name of the test case
Initial conditions	Description of the state of the system before the execution of the test case. This state is the one needed for the correct execution of the test case
Configuration description	Description of configuration conditions, tools involved and connected
Description of functionality to be tested	Functionality to be tested
Partners, people involved	List of people involved in the test, partners, user-groups, other people needed
Validator(s) skill	Skill of the people involved in the test during the validation with end-users
Data set used	Names of or references to the data sets used or their number
Steps	Steps of the test
Expected results	Expected results of the test
Variations	Some changes that can be done for testing some slightly different functionalities
Issues	Other issues, notes, annotations if the Test Case is not clear
Test case Scope/Type	The applicability scope of the test case, such as GUI, backend, etc and the type of the test BlackBox, WhiteBox, UnitTest, and so on

3 Test case and content design issues (ILABS, XIM)

There are several test cases that have been defined and described in relation to content design. Their primary scope is to verify functionalities and operational behaviour of the authoring part of the framework. For this purpose content to be used here should provide the highest degree of coverage in terms of possible issues/problems that any part of the system may experience afterwards during daily operation. This, one the one hand, implies having high end content, on the other hand, content of this kind is usually part of the top relevant one for content owner and cannot be used for free distribution. This consideration suggests to divide test case related content several kinds:

- Content to be used only for internal validation testing activities (therefore non publicly available);
- Content to be used for broader test (including but not only) performance and load ones;
- Content to be used for dissemination and demonstration purposes (therefore publicly available).

Having said this it is worth examine how to use each kind of content in the actual test case execution.

4 Test case content usage (TISCALI, EUTELSAT, COMVERSE, ILABS)

As just mentioned there are going to be several kinds of content to be used inside the project each with a specific role and scope in the validation phase. Project validation structure is based on several different distribution channels to be addressed both in terms of specific content development/aggregation and distribution. Aside this there is the relevant aspect of P2P approach for content sharing and exchanging at B2B level. What just stated has a set of impacts on the way content has to be mapped onto test cases. Scope of the present document is therefore to support the testing activities providing a basic set of info on content available

for testing purposes and how it has been mapped onto foreseen test cases, moreover this accompanying document should support in easily and quickly locate content in the repository.

5 Adopted validation methods & criteria (ACIT, DSI)

Given the pioneering nature of AXMEDIS project validation methods and criteria have been devised in order to assess not only technical feasibility and soundness of results but also attractiveness for the end-user community (in this case the B2B one). The present document is intended to represent accompanying info for the content delivered either for evaluation or for demonstration purposes therefore here will be just outlined the rational at the back of the validation process to allow a better understanding of how content has been collected, selected and mapped onto defined use and test cases. This will lead the reader in browsing through the document and its appendices to find out what content should (or could) be used for performing a certain test, which are its characteristics, where can it be found... in a word all information needed to set-up/perform a meaningful test activity. Further details on this topic can be found in DE10.4.1, DE2.1.1 and DE2.2.1 respectively covering assessment and evaluation, user requirements/cases and test cases.

6 Metrics & indexes for validation (ACIT, DSI)

Following what briefly presented in the previous section and given the abovementioned references, we now briefly focus (for reference) on metrics and indexes to be used during the validation and evaluation phase. While selecting objects to be used for the test phase it is necessary to check if they match the intended usage scope (public/internal), allow collecting the defined metrics and elaboration validation indexes. Please note that metrics have been defined along with reference values to be used for an objective evaluation of project performances and achievements. It is necessary to take into account that at this stage of the project development the first round of requirements and specification has been concluded and therefore we can focus on the validation. Metrics used in this phase should enable collection of objective data to be used as a corrective/improving feedback on the development process. In the following table are reported the main metrics to be collected in relation to content production and management.

WP8.1 – Content Production for research test cases and validation

Number of guidelines for the content production of test cases produced
Number of guidelines for validation and test produced
Number of content single resources provided by the partners per test case ¹
Number of content collection provided by the content partners per test case ²

WP8.2 – Content identification for validation

Number of produced content components and objects
Number of test cases with positive validation results
Percentage of test cases identified in WP2 with positive validation result
Content quality
Format quality
Aspect quality
Number of content pieces identified for technical validation
Number of content pieces identified for the demonstrators

¹ The metric is subdivided into components each relating to a specific kind of asset, nominally: Video, Text documents, Audio file, Animations, Education info, Multimedia, MPEG4 content and Games and tools

² The metric is subdivided into components each relating to a specific kind of asset, nominally:

- Content management system integration and feedback,
- Automating content production and formatting into CMS of integrators,
- Content production and distribution in push and on-demand for I-TV,
- Content production and distribution on-demand for PC,
- Content production and distribution on-demand for mobile phones, and new generation on PDAs,
- Content production and distribution to kiosks and local PDAs,

Number of content pieces identified for the several distribution channels
Usability
Accessibility
User Acceptance
Metadata completeness (Expert evaluation performed on a content sampling procedure)
Number of content collection provided by the content partners per test case ³
Number of content schema and scenarios produced on the basis of which the validation of the tools will be performed ⁴
Number of content pieces integrated
Number of metadata loaded in different languages
Average number of languages supported for each object and metadata information
Number of metadata improved
Number of text added in other languages
Number of other related content components added
Number of synchronizations among different media
Number of enabling language technologies evaluated
Number of language technologies implemented

In the following table are reported and synthetically described the metrics related to content production and distribution.

WP9.6 Content production and distribution

Number of connected end users during the demonstration
Number of transactions that will be performed by AXMEDIS compliant distributors
Number of formatting styles
Number of digital objects automatically combined
Number of accesses of external experts and companies
Number of content movements performed on the AXMEDIS P2P infrastructure
End user satisfaction rating for use of service
Cost of production and integration
Distribution cost at level B2B
Distribution cost at level B2C
End user price of product created by AXMEDIS

7 Samples of contents (ANSC, ILABS, SEJER, AFI, etc.)

The present section reports basic info on the available content as provided by each content owner partner in the consortium. The aim is to provide a clear understanding of what is available and subsequently reported in terms of description and reference. Once again is worth taking into account that there is a high degree of correlation between this deliverable and DE2.2.1 as there foreseen dataset have been pointed out and named, while here they have to be mapped onto real content. It is given for granted that during project life, whenever will occur a revision of test cases or an addition of new ones, these changes have to be reflected into this document and also in the related data base to keep consistency. Just for the sake of clarity is worth mentioning that content description by partners is based on what already mentioned in DE2.2.1.

³ The metric is subdivided into components each relating to a specific kind of asset, nominally: Video, Text documents, Audio file, Animations, Education info, Multimedia, MPEG4 content and Games and tools

⁴ The metric is subdivided into components each relating to a specific kind of asset, nominally: Video, Text documents, Audio file, Animations, Education info, Multimedia, MPEG4 content and Games and tools

7.1 ANSC

7.1.1 Content description

Contents from ANSC consist in different types of archives; they are mainly related to the ANSC history and activity namely:

- **Historical archive:** contains documents from 1650 to present day.
- **Library:** music manuscript and early editions.
- **Archive of photographs:** photographs from the end of XIX century to present day related mainly to ANSC concerts but also various artists, singers, actors, musicians, and so on.
- **Sound archive:** 3 archives: Sound archive of concerts, Archive of oral traditional music, Archive of recordings.
- **Musical instrument museum:** Documentation about ANSC collection musical instrument: Photographs, technical drawings.
- **Archive of press \reviews**
- **Archive of playbills**
- **Chronology of the concerts from 1895 to present day**

7.1.2 Content format

- **Historical archive**
 - Dimension: is partially digitized (35.000 images).
 - Digitization format:
 - Cataloguing standard: **EAD**
- **Library**
 - Dimension: is going to be digitized.
 - Cataloguing standards: **SBN** (The Italian national service for libraries)
- **Archive of photographs**
 - Dimension: about 13000 images
 - Cataloguing standard: **Scheda F ICCD** customized and transformed in XML.
- **Sound archive**
 - Dimensions:
 - Sound archive of concerts:
 - Archive of oral traditional music:
 - Archive of recordings:
 - Cataloguing:
 - Proprietary (for oral traditional music),
 - Unimarc (for recordings and concerts).
- **Musical instrument museum**
 - Dimension: documentation about ANSC collection of 297 musical instruments (photos, technical drawings...)
 - Cataloguing standard: None.
- **Archive of press \reviews**
 - Dimension: documentation about ANSC collection of 297 musical instruments (photos, technical drawings...)
 - Cataloguing standard: None.
- - **Archive of playbills**
 - Dimension: not defined yet digitization in progress.
 - Cataloguing standard: None. (playbills are attached documents to chronology records)
- **Chronology of the concerts from 1895 to present day (database)**

- Dimension: 150 Mb of XML records
- Cataloguing standard: proprietary based on EAD

7.1.3 Content location

Contents are mainly managed by means of a XML CMS (DAMS Digital Archives Memory Storage. Engine: Extraway). All cataloguing standards will be merged into our CMS. For the testing phase selected samples are available under the following structure on the project website:

- **ANSC-Content:** Root directory
 - **Samples:** actual samples

7.1.4 Content constraints

- **Historical archive:** partially digitized. Digitization to be completed depending from funds available.
- **Library:** is going to be partially digitized.
- **Archive of photographs:** clearance of rights is required
- **Sound archive:** Records of our concerts are not available because at present clearance of rights is not available
- **Musical instrument museum:** no cataloguing standard so far. Structure not defined yet.

7.1.5 Content samples

Sample 1

Description

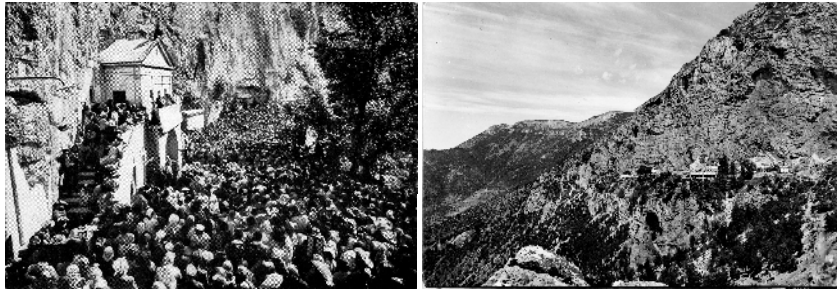

The samples reported hereafter are part of the ethnographic archive and represent the documentation of a traditional celebration related to religion. They comprise audio recording and images.

Sample 2

Description

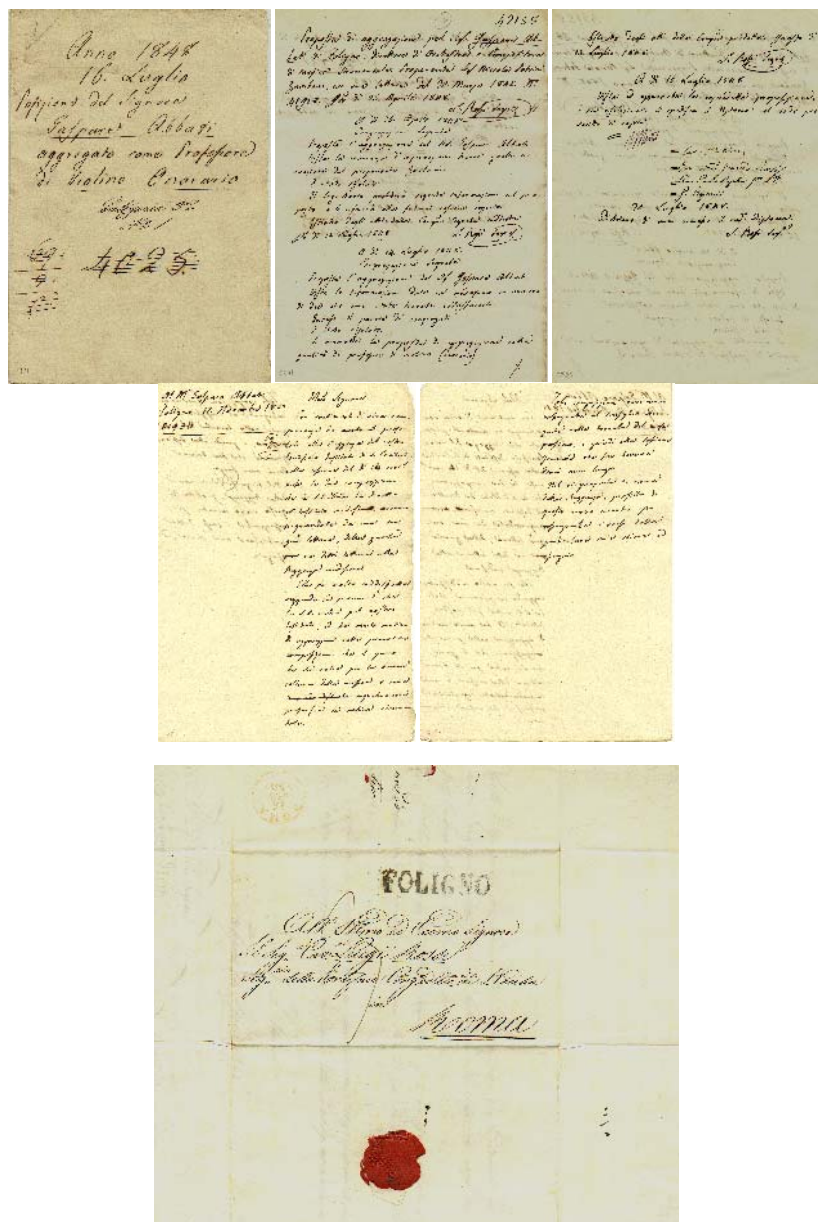

The samples reported hereafter are part of the historical archive. In the specific sample we have a XML file holding the data (not yet metadata as the application for dealing with the newly designed MAG format is not yet available) and images related to the personal recording of a member of the academy (only some of them are presented in the deliverable). Obviously this latter data is provided hereafter for testing purposes, as it cannot be disclose without proper approval of both the association and the earls of the member given the present rules about privacy.

7.2 ILABS

7.2.1 Content description

Contents from ILABS consist in different types of learning objects and courses; they are mainly related to ILABS involvement in the educational and cultural environment. ILABS has developed an e-learning infrastructure covering the whole value chain from editing to delivery of educational content and offers to own customers also the possibility of “content development on demand”. From major chemical companies have been developed ad hoc training on clinical and medical subject too. So in the overall ILABS content covers the following kind of contents:

- **Art:** fruition, understanding and restoration of art objects (to this category will belong most of the sample objects for the test case).
- **Other:** clinical training on breast cancer / first emergency intervention / privacy management in medical environment; training courses for banks / financial institutions. Maintenance courses to be used on wearable computing (most of this content is governed by contracts preventing free usage).

7.2.2 Content format

- **Art**
 - Dimension: 165 Mb
 - Formats: TIF, JPEG... for images, AVI, MOV, MPEG for video, WAV, MP3 for audio
 - Cataloguing: LOM/IMS indexing

7.2.3 Content location

Contents are managed by means of a proprietary XML based CMS (*learn eXact*[®]). For the project purpose selected content have been pre processed and saved in form of compressed archives. Each compressed archive holds a basic aggregated content as the one presented in the following sections and has been “*published*” according to the definition of IEEE/AICC/IMS/SCORM standards. For the testing phase of the project a set of sample content has been made available and is divided in directories having the following structure:

- **ILABS-Content:** Root directory.
 - o **Artist:** Child directory holding 107 artists description.
 - o **Context:** Child directory holding 3553 records of context info
 - o **Iconography:** Child directory holding 1162 records of art-work
 - o **Masterpiece:** Child directory holding 1339 records of masterpieces

7.2.4 Content constraints

- **Art:** content contains mainly static and does not comprise much audio /visual content.
- **Other:** the overall set of the archive is composed by custom designed and produced content. Usage is therefore limited only to internal testing.

Given the origin of the content itself, its original intended usage and contract in place, at present, all content reported and provided so far is available only for testing purposes and cannot be disclosed or distributed until proper agreement have been signed with all parties related to IPR involved.

7.2.5 Content samples

7.2.5.1 Art

In the present section are reported some samples of basic and aggregated content (usually rendered in form of HTML pages) that have been extracted by our archive for the specific purpose of testing AXMEDIS. For the sake of simplicity are presented only samples of aggregated content (that is full pages) as the basic components can be clearly identified. Some sample of coding and structure used to achieve the presented result is also provided at the end of the section. Please note that content appearance is very simple and purposely lacking any reference to “brand” or “owner” as this content are supposed to be used to prove the functionalities of AXMEDIS, therefore they have to be potentially adapted and “localized” in an automatic manner, this would be very hard if the source content was already clearly localized (e.g. with explicit logos or references in terms of colour or style...). Presented samples cover basically the basic sets of art related content available. Each set is presented by a few sample (at most 4) and for one of this is also reported the associated structure and coding.

Battesimo di Cristo
Battesimo di Cristo
1470-1474 circa
Olio e tempera grassa su tavola
151x117
Firenze, Galleria degli Uffizi
Il dipinto raffigurante san Giovanni che battezza Cristo sotto gli occhi di due angeli fu realizzato per la chiesa di San Salvi a Firenze e dal 1914 si trova agli Uffizi. La tavola fu verosimilmente commissionata al Verrocchio, maestro di Leonardo, ma come era consuetudine di questo artista, fu in gran parte realizzata dagli allievi. Fin dai primi del Cinquecento le fonti ricordano che il giovane Leonardo eseguì l'angelo sulla sinistra, più recente l'attribuzione all'artista del paesaggio sullo sfondo. Sul dipinto sarebbero intervenuti anche altri allievi del Verrocchio come Domenico di Michelino, Sandro Botticelli e Francesco Botticini.

Autoritratto
Autoritratto
dopo il 1515
matita rossa su carta
21,3x33,3
Torino, Biblioteca reale
L'intenso autoritratto di grande potenza espressiva raffigura Leonardo ultrasessantenne, con una folta e lunga barba, quando ormai da tempo si trovava in Francia. Il foglio stato probabilmente tagliato sui lati per rendere meno cospicua la presenza delle spalle fortemente incurvate. Leonardo volle affidare a un disegno la memoria del proprio aspetto fisico, secondo un'idea che gli era congeniale e che esprime nei suoi appunti. Gli studiosi ritengono che periodicamente Leonardo abbia affidato al disegno o alla pittura la propria effigie, che viene variamente riconosciuta in diverse opere. Molti studiosi ritengono improbabile che Leonardo, ormai vecchio, mantenesse l'accuratezza del tratto disegnativo che caratterizza l'autoritratto, e non tutti sono d'accordo nell'attribuzione a Leonardo. Si ritenuto addirittura che il disegno sia un falso eseguito ai primi dell'Ottocento. Un'ipotesi forse errata ma curiosa che il ritratto raffiguri il padre di Leonardo e sia stato eseguito dall'artista intorno al 1505.

7.3 SEJER

7.3.1 Content description

Content produced by Nathan and Bordas are object called “pedagogical units”, that can be compounded. The biggest pedagogical unit is in fact the whole schoolbook. Pedagogical units are complex objects, mixing different kind of “atomic” formats: images, text etc. Besides, metadata are associated to each pedagogical unit. The “atomic” content formats use to construct a pedagogical unit are those defined in 3.2 Content Description of DE2.2.1.

7.3.2 Content format

Pedagogical units are complex objects, mixing different kind of “atomic” formats: images, text etc. Besides, metadata are associated to each pedagogical unit. RDF and raw XML are used to describe metadata (depending on the capacities of the viewer that will be used to display the resource).

- **XML User Interface Language (XUL):** A XUL file allows describing a GUI with usual widgets (buttons, trees etc.). Note that XUL content alone has no purpose. It is usually associated with Javascript files and CSS files.
- **JavaScript:** Javascript Files are used to provide interactivity into Web Pages and XUL GUI.
- **Cascading Style Sheets (CSS):** CSS files are used to customize XUL GUI or HTML pages aspect. Viewing a CSS file by itself is meaningless. CSS Files are usually associated to HTML or XUL Files
- **Resource Description Framework (RDF):** RDF is an XML dialect used to describe Graphs. It may serve to describe the data model of an application, or RSS feeds for example. In our case it is only used as data model and has no meaning without a XUL file using it.
- **Hypertext Markup Language (HTML/XHTML):** HTML pages, possibly dynamic if associated with a JS file
- **Macromedia flash:** Vector Animations, Videos, Audios using the Macromedia Flash format.
- **Scalable Vector Graphics (SVG):** SVG is an XML dialect allowing the description of Vector Graphics, possibly with some interactions using Javascript.

7.3.3 Content location

Contents are managed on the file system. The content is then processed to produce “manuals” in a single file which is in a proprietary format. For the project purpose, selected content have been saved on the file system in a hierarchical files/folders structure. Therefore the related portion of the archive is structured as follows:

- ec\content\demo\html\images\ holds available pictures
- ec\content\demo\html\medias\ holds available medias (flash)
- ec\content\demo\html\EC-chap#.cfa\ holds the related content in XHTML

Some steps are necessary in order to "execute" the manual, but they are not necessary if retrieving the content is enough.

7.3.4 Content constraints

For the moment, the manual contains complete manual, therefore it is limited to internal testing. We are studying the possibility of generating demonstration versions that will contain only a part of the manual. Such version could be used in demonstration. Content provided so far has usage restrictions and therefore can only be used for internal testing.

7.3.5 Content samples

Sample 1

Description

The presently available content is related to a French course on civic education. The course comprises info on the present juridical framework as well as other useful and reference info for the learner.

Doc 2 Du suffrage censitaire au suffrage universel

Le temps de la Seconde République : 1848-1851	1848 : le suffrage universel masculin est proclamé pour les hommes de plus de 21 ans : 9,4 millions d'électeurs.
Le temps du Second Empire : 1851-1870	1851 : le suffrage universel masculin demeure, mais Napoléon III favorise des candidats officiels.
Le temps de la République : depuis 1870	1870 : la III ^e République confirme le suffrage universel masculin . 1944 : le droit de vote est reconnu aux femmes . 1974 : la majorité électorale est abaissée à 18 ans . 1992 : conformément au traité de Maastricht, tout citoyen de l'Union européenne résidant en France a le droit d'y voter aux élections municipales .
Périodes	Évolution du droit de vote
Le temps de la Révolution : 1789-1799	1789 : le droit de vote est accordé aux hommes de plus de 25 ans qui paient un impôt direct : le cens . Ce sont les citoyens actifs . 1792 : la République et le suffrage universel masculin sont proclamés : 1,9 millions d'électeurs. 1795 : le suffrage censitaire est rétabli : 30 000 électeurs.
Le temps du Consulat et du Premier Empire : 1799-1815	1799 : Napoléon Bonaparte impose le suffrage universel masculin . Les membres des assemblées sont désignés sur des listes de notables élus par les citoyens.
Le temps de la Monarchie : 1815-1848	1815 : le suffrage censitaire est rétabli par Louis XVIII : 90 000 électeurs. 1831 : Louis-Philippe abaisse le cens de 300 à 200 francs : 240 000 électeurs

Cours

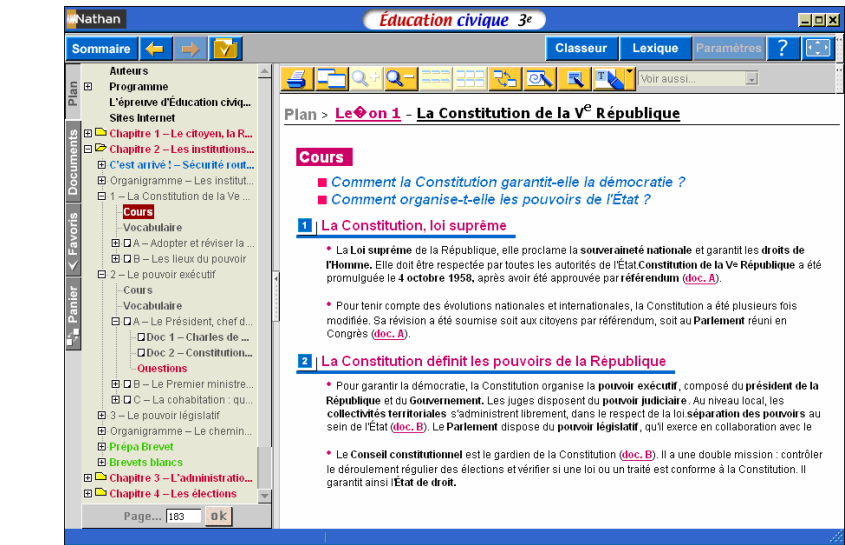

- Comment la Constitution garantit-elle la démocratie ?
- Comment organise-t-elle les pouvoirs de l'État ?

1 | La Constitution, loi suprême

- La **Loi suprême** de la République, elle proclame la **souveraineté nationale** et garantit les **droits de l'Homme**. Elle doit être respectée par toutes les autorités de l'État. **Constitution de la Ve République** a été promulguée le **4 octobre 1958**, après avoir été approuvée par **référendum** (**doc. A**).
- Pour tenir compte des évolutions nationales et internationales, la Constitution a été plusieurs fois modifiée. Sa révision a été soumise soit aux citoyens par référendum, soit au **Parlement** réuni en Congrès (**doc. A**).

2 | La Constitution définit les pouvoirs de la République

- Pour garantir la démocratie, la Constitution organise la **pouvoir exécutif**, composé du **président de la République** et du **Gouvernement**. Les juges disposent du **pouvoir judiciaire**. Au niveau local, les **collectivités territoriales** s'administrent librement, dans le respect de la loi. **séparation des pouvoirs** au sein de l'État (**doc. B**). Le **Parlement** dispose du **pouvoir législatif**, qu'il exerce en collaboration avec le
- Le **Conseil constitutionnel** est le gardien de la Constitution (**doc. B**). Il a une double mission : contrôler le déroulement régulier des élections et vérifier si une loi ou un traité est conforme à la Constitution. Il garantit ainsi l'**État de droit**.

Description
This document is a sample of question document.

7.4 AFI

7.4.1 Content description

Contents from AFI consist mainly in audio files. The archive contains all CDs produced by AFI associated. For each CD is available info about all the recordings (audio tracks) included in the CD with their own related data: title, version (original, remix...), length, artists, authors, composers, publisher, producer, ISRC code, catalogue number, label.

7.4.2 Content format

For the testing phase a sample of items (music tracks) have been identified and delivered. Their format is twofold:

- AIFF – to provide the best possible quality, but a drawback is the average dimension of the file that makes it unusable for distributions channels where file dimension is a major limit either for bandwidth or storage usage (on average file size is 29 Mb).
- MP3 – to provide a good quality level but a much affordable size (on average file size is 3 Mb)

7.4.3 Content location

Contents from AFI are mainly stored in CMS (php+mysql / GUI flash+html) on in the file-system. The CMS will be the same for many different production partners (AFI DB for all associates). Every partner is identified by user/pass. In appendix is provided the list of contents available for testing. Such list is the result of a SQL query on our database, such result has been then made available in tabular format and saved in several file formats (PDF, XLS, CVS) taking into account import possibilities. Given database origin and use columns names are in Italian but hereafter is provided a mapping:

Col.	Italian Name	Meaning
A	Id della tabella registrazioni	Recordings table Id
B	Id della tabella editoriale (usata per l'opera originale)	Editorial table Id (used for original operas)
C	Titolo registrazione	Recording title
D	Versione della registrazione	Recording version
E	Durata	Duration
F	Esecutori	Executors
G	Editori	Publishers / Editors
H	Autori	Authors
I	Codice ISRC	ISRC code
J	Azienda Proprietaria del Master	Company owning the Master
K	Path al relativo file MP3	MP3 file path

AFI environment files are organised in directories that reflect the archival process. In order to make data transfer between AFI and AXMEDIS repository easier it is suggested that the AFI portion of the AXMEDIS repository would be structured according to the following schema:

- **AFI-Content:** Root directory.
 - o **AIFF:** Child directory holding AIFF files.
 - o **UPLOAD_OPERE:** Child directory holding original operas in MP3 format.
 - o **UPLOAD_R:** Child directory holding recordings in MP3 format.

All AIFF files should be store in the created AIFF directory, while MP3 files should be split in the other two directories according to the provided list of content. For the time being the rational for classifying content between the section **UPLOAD_OPERE** or **UPLOAD_R** is the value of the current record of the column **D** of the selection report table in accordance with the following rule:

Destination directory	D-field value
UPLOAD_OPERE	ORIGINAL
UPLOAD_R	Any other value

7.4.4 Content constraints

At present all content provided is available only for testing purposes and cannot be disclosed or distributed.

7.4.5 Content samples

Given the fact that provided content is audio samples cannot be reported here as they are, what is instead reported hereafter is a sample of description of the provided content.

7.5 DIPITA

7.5.1 Content description

The training corpora collected by DIPITA have two different purposes reported hereafter:

1. Text corpus for keyword extraction: multilingual texts of various typologies and topics, in txt format.
2. Text corpus for content adaptation: document with same content but different format.

7.5.2 Content format

Text corpus for keyword extraction is characterised as follows:

- Languages required: en, it, fr, ge, sp.
- Textual tipologies:
 - a. enciclopedia (entries from multilingual wikipedia: "Descartes" and "protein")
 - b. multimedia (description of AXMEDIS project on multimedia distibution)
 - c. storytelling ("Hansel and Gretel" story; "Little Redcap" story)
 - d. subtitles ("Full metal jacket" subtitles; "Easy Rider" subtitles")
 - e. (*) descriptions of virtualmuseums/art cd-rom (expected from AXMEDIS partner)
 - f. (*) education (expected from AXMEDIS partner)

(*) = optional

While text corpus for content adaptation is characterised as follows:

- Format to be treated: txt, rtf, html, pdf, ps. All formats are supposed to be converted at least in plain text, in order to be processed by the linguistic interface.
- Texts collected:
 - a. Digital music report, 2005 (pdf, txt)
 - b. European constitution (pdf, rtf, txt)
 - c. Hibernate documentation (pdf, html, txt)
 - d. HTML specification (pdf, ps, html, txt)

7.5.3 Content location

DIPITA content has been structured into the following directories:

- DIPITA-Content
 - o content_adaptation
 - digital-music-report
 - european_constitution
 - hibernate_documentation
 - html_specification
 - html40_html
 - o appendix

- o images
- o index
- o interact
- o intro
- o present
- o sgml
- o struct
- o style
- o keyword_extraction
 - enciclopedia
 - descartes
 - protein
 - multimedia
 - axmedis
 - storytelling
 - hansel_gretel
 - red_cap
 - subtitles
 - easyrider
 - o srt
 - o txt_converted
 - full_metal_jacket
 - o srt
 - o txt

7.5.4 Content constraints

Not applicable as a whole as it depends on the specific content set.

7.5.5 Content samples

Not applicable

7.5.6 Content list & references

7.6 XIM

7.6.1 Content description

Content from XIM consist of movie clips in a variety of formats, jpeg images and flash animations, plus some interactive mini-games. Movie clips have been encoded by XIM from high quality analogue source (usually Beta SP), audio is encoded from uncompressed 16bit/44.1KHz, usually transferred digitally from original film soundtrack stems, and still images are from high resolution scans from 35mm transparency.

Film-related content

This content has been developed by XIM for film distributors and can be freely used for testing and validation within AXMEDIS. These movie clips, mini-games, screensavers, wallpapers and other content were developed for ‘viral marketing’ purposes, whereby end-users are encouraged to download and share the content for means of promotion of the related feature film.

EDiCT dissemination content

This set of movies and animations was developed by XIM as part of the IST Project EDiCT, and was used in DVD format at exhibitions and online in SWF format to explain the architecture and workflow of the project. The objects consist of MPEG2 files along with an interactive SWF version for online viewing. Again, this content can be freely used within AXMEDIS.

7.6.2 Content format

- Movies: QuickTime (.mov), MPEG2 (.m2v), Real Media (.RM)
- Audio: MP3
- Images: JPG
- Animation: QuickTime Animation Codec, or sequential TIFF
- Interactive games: Flash SWF.

7.6.3 Content location

These objects are archived in xim’s filesystem and can be made available via FTP.

7.6.4 Content constraints

With the exception of the MPEG2 (DVD-delivered) content, file sizes are optimized for internet delivery to fast modem/broadband, and movie dimensions are limited to keep file sizes small. The SWF files are scaleable in dimensions, but most contain bitmap content so quality degrades if they are enlarged.

7.6.5 Content samples

7.6.5.1 Film-related

In the present section are reported some samples from XIM’s film release projects. These can be used by for testing and distribution as long as any image or movie content is not altered. The movie and swf objects in-

clude html wrapper pages, although it might be preferable to omit these to allow more flexibility for viewers etc. Movie clips

Sample 1

Description

Compressed downloadable movie trailer (QuickTime 1min 58 secs, 480x268 resolution, 13FPS, 14.86Mb). Smaller, more highly compressed versions also available.

ID

7.7 DSI

The following content is only for validation of tools. It cannot be used for distribution.

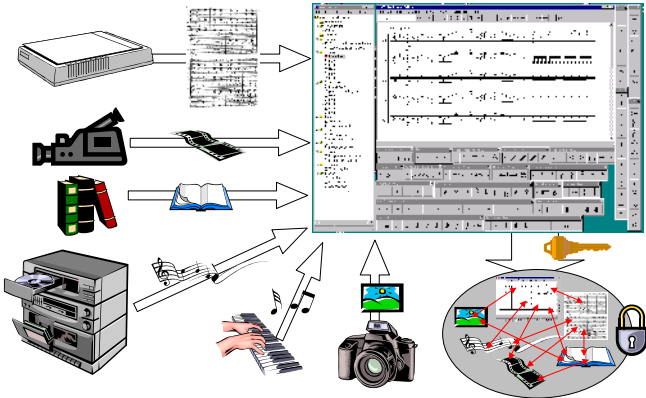

7.7.1 Content description

The content provided consists of the following WEDELMUSIC multimedia objects. They may include several type of resources, metadata, images, music scores, images of music scores, video, animations, audio files in different formats, etc. They are structure in the following main objects and directories:

Allegretto in G v2-1.wdf	Mainly music score and an image
Arpeggio-Ubung-V2-0.wdf	Mainly music score and an image
Auld-lang-Syne-Schottland.wdf	Mainly music score and an image
auld.wdf	Mainly music score and an image
Bach-Arioso-V2-0.wdf	Mainly music score and an image
Bach-Concerto-V2-0.wdf	Mainly music score and an image
Bach-Invention-n11-V2-0.wdf	Mainly music score and an image
Bach-Prelude-in-C-V2-0.wdf	Mainly music score and an image
Bocelli-v-3-0.wdf	Video, music score, MP3, Flash, html, gif, documents
Composition.wdf	Mainly music score
dettatol.wdf	Mainly music score
Examples-of-Symbols	Many music scores
GesualdoDemo.wdf	Metadata,Mp3, doc, music score
Mozart-Eine-Kleine-2-3.wdf	Metadata, Video, audio, midi, mp3, images, gif, etc.
mozart-heine-klein-reduced.wdf	Mp3, image, music score
Mozart-K581-light-v1-0.wdf	Metadata,Mp3, document, tif, image
Pierrot lunaire op.21_02.wdf	Metadata,Images, music score, metadata,
PromoWEDELMUSIC.wdf	Flash
provaflash.wdf	Several flash, PDF,
uccellinidemo.wdf	Metadata, music score, wav, doc, images,
Verdi-Traviata-Act1-v2-2.wdf	Metadata, mp3, doc, jpg,
Verdi-Traviata-Act3-v2-1.wdf	Metadata, mp3, doc, jpg,
vivaldi-demo.wdf	Metadata, video, midi, jpg
Waltzing Matilda Integrated v2.wdf	Metadata, images, mp3, html
Waltzing Matilda Marie Cowman v2.wdf	Metadata, images, mp3, html

7.7.2 Content format

The content format is WEDELMUSIC non protected, that means a directory containing all digital resources as depicted in the following and the XML based files of WEDELMUSIC for the metadata and the cross references among the them. The format can be read by WEDELMUSIC editor downloadable for free from www.wedelmusic.org and it is documented there.

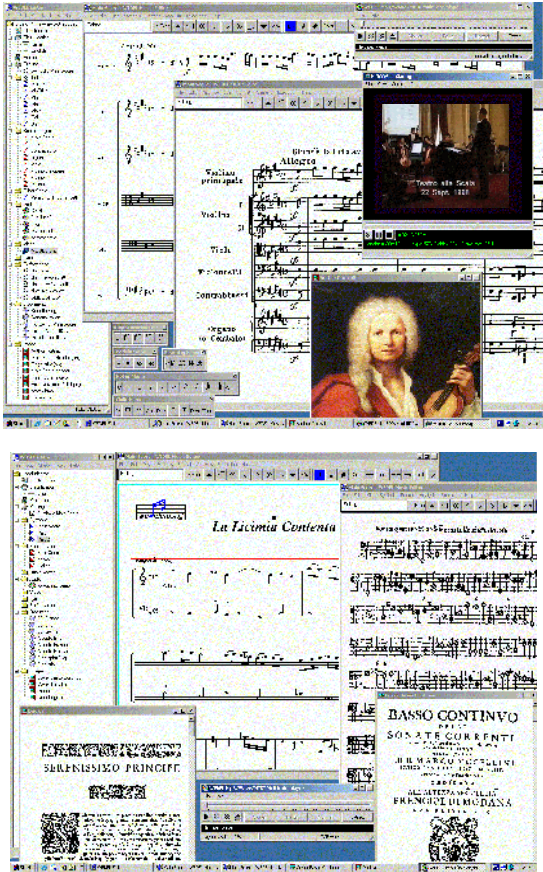

7.7.3 Content location

Located at DSI and in any free distribution of WEDELMUSIC demo CD rom.

7.7.4 Content constraints

Non commercial use.

7.7.5 Content samples

7.8 FHGIGD

7.8.1 Content description

Contents from FHGIGD consist in test content for audio fingerprinting made up of different audio files from numerous artists to reflect the wide variety of existing audio files.

7.8.2 Content format

- Dimension: 6.30 Gb
 - Formats: FLAC (Free Lossless Audio Codec), see at: <http://flac.sourceforge.net/>
 - Cataloguing: None
 - Metadata is embedded in the file format, for more details see at: <http://flac.sourceforge.net/>
- FLAC stands for Free Lossless Audio Codec. Grossly oversimplified, FLAC is similar to MP3, but lossless, meaning that audio is compressed in FLAC without any loss in quality. This is similar to how Zip works, except with FLAC you will get much better compression because it is designed specifically for audio, and you can play back compressed FLAC files in your favorite player just like you would an MP3 file. FLAC is freely available and supported on most operating systems, including Windows, "unix" (Linux, *BSD, Solaris, OS X, IRIX), BeOS, OS/2, and Amiga. There are build systems for autotools, MSVC, Watcom C, and Project Builder. The FLAC project consists of:

- the stream format
- reference encoders and decoders in library form
- flac, a command-line program to encode and decode FLAC files
- metaflac, a command-line metadata editor for FLAC files
- input plugins for various music players

FLAC is available at no cost. It means that the specification of the format is fully open to the public to be used for any purpose (the FLAC project reserves the right to set the FLAC specification and certify compliance), and that neither the FLAC format nor any of the implemented encoding/decoding methods are covered by any known patent. It also means that all the source code is available under open-source licenses. It is the first truly open and free lossless audio format.
(For more information, see the [license page](http://flac.sourceforge.net/license.html), <http://flac.sourceforge.net/license.html>).

7.8.3 Content location

The content has been provided by means of DVDs holding the sample content according to the structure reported afterwards in the content and list reference of this section. On the server repository this contributions can be found in the FHGIGD-Content directory and all related sub-directories.

7.8.4 Content constraints

Given the original content source, it is necessary to use a specific license for accessing and using the provided set of sample content. It is nevertheless necessary to point out that this collection is of free use for non-commercial/research purposes and therefore can be freely used in the initial internal test phase. In more detail the test content for audio fingerprinting was downloaded from <http://www.archive.org/audio/etree.php>. As mentioned before the downloaded test content is licensed, the used license kind drops under the Creative Commons (CC, <http://www.creativecommons.org>) license agreement and the licensing conditions of the individual content are included in the test material.

7.8.5 Content samples

Example 1: Kai Kln - "Hair of the Bud"

Author: Kai Kln – Originally released in 1991 on Eric Broyhill's "Insert This Way Records" as a 7" vinyl record.
Source: Master Reel > Chrome Cassette > PC(.wav) > FLACfrontend(8)/foobar2000(metadata)
Recorded by: Eric Broyhill / Matt Erick / Zak Allentuck
Creative Commons license: Attribution-NonCommercial-NoDerivs
Categories: Rock
AXMEDIS Project

Kai Kln – demo on DVD – Originally distributed in 1989 under various names including "Hump the Drummer" and "Beer Nuts". The band would dub cassettes at home and include some live material after the studio songs presented here.

Example 2: Fjord

Author: Fjord – Experimental postrock music from the netherlands with world music influences.
Date: January 31st, 2004
Source: CD-DA
Creative Commons license: Attribution-ShareAlike
Categories: Post-Rock; World Music; Pop Experimental; Psychotic

Fjord is a 4 men and 1 woman band from The Netherlands generating out of their voices, 1 guitar, 1 sax, 1 flute, 1 keyboard and 1 bas and drums post-music music. Their website is: <http://www.fjordmusic.nl> Genre: Postrock, postpunk, psychedelia.

8 Content by test case (OD2, ANSC, ILABS, SEJER, AFI, ALL)

This section describes in detail the data set used and referenced into the data set row of test cases. This is done providing reference to content available so far and reported in the previous sections, either via direct mentioning or via referencing.

Please note that this section it is not a mere replica of the corresponding section of DE2.2.1 but it is an actual complement to that as for each item described in DE2.2.1 section 18 generically, here should be provided a clear reference to an actual content.

In detail hereafter are reported references to the actual file/location holding the content to be used for the test case. Such content has to be selected starting from the data sets described in section 7 of this document and

available in the AXMEDIS repository. Please note that this section has to be kept consistent with the available content database (at least as far as content used for test cases is concerned. In section 5 each partner should have placed an overall description of own content and a reference to either a list of detailed URL or links / keys for location into some repository that should be provided as integral part of this document, please note that this deliverable is not a report it is the actual collection of the available objects and this document is just a reference tool to understand what is available and where. Data are inserted in a table like format following the schema reported hereafter:

ID	Name						
Object identifier in the context of the archive associated to this doc.	Name of the object as reported in the storage media (including but not limited to file system)						
Kind	Size	Format	Owner	Usage			
The nature of listed object: e.g. document, file, text, image, audio, video, multimedia, configuration file...	The object dimension in Kb / Mb ...	The format of the object: AVI, MPEF, AIFF, JPEG, TIFF, DOC, PPT...	The partners that owns the content	Pub.	1	Rest.	2
Location							
The URL or any other clear, simple location information that will allow the testing team to retrieve the specified content within the set of data available and associated to this document.							
Note							
Any relevant information deemed necessary for object management and usage, including but not limited to constraints, advices or additional info to be taken into account. In this field should also be reported some note in case the document is marked “Rest” (restricted in usage) at least to help the testing team to understand what kind of usage restriction applies							

In the previously reported schema the Usage filed is divided into “Pub” (public use) and “Rest” (restricted in usage). The presence of an “x” in the side filed implies that the related condition applies. Obviously it should be not possible to have simultaneously both, yet it could be that a content that is publicly available for demonstration purpose has a usage restriction (for example no commercial use of the same content can be done...) all such info should be reported in the note field.

[ILABS] Please note that so far only in same case have already been inserted values in the content description tables (especially as far as content type and use are concerned). This has been done on the basis of the knowledge we have of the content as described in the DE2.2.1; partners that have in charge the test case should better specify those aspects and in case they do not have direct access to content, they should point out who could be the potential provider (or providers).

All partner holding content that will be used for the experimental phase HAVE TO insert data here for the objects they are going to provide for the test phase.

8.1 AXDS-DB1

A group of at least 20 different AXMEDIS objects with at least version 1.0 and 1.1. These objects can include different type of contents: no limitations to that.

Associated resources							
Note							

8.4 AXDS-Editor2

Composite AXMEDIS Object containing several components, the grant to enrich that object. – **Any of the samples reported in the DB or kiosk section.**

8.5 AXDS-Editor3

Composite AXMEDIS object containing at least a resource, the grant to export that resource. – **Any of the samples reported in the DB or kiosk section.**

8.6 AXDS-Editor4

An AXMEDIS object containing at least one element. – **Any of the samples reported in the DB or kiosk section.**

8.7 AXDS-Editor5

Composite AXMEDIS object. – **Any of the samples reported in the DB or kiosk section.**

8.8 AXDS-Editor6

An AXMEDIS Object contains at least a resource, the grant to somehow modify that resource. – **Any of the samples reported in the DB or kiosk section.**

8.9 AXDS-IVE1

An AXMEDIS Object containing at least one element, the grant to manage or somehow modify that resource. – **Any of the samples reported in the DB or kiosk section.**

8.10 AXDS-IVE2

An AXMEDIS Object containing at least one resource, the grant to manage or somehow modify the resource. – **Any of the samples reported in the DB or kiosk section.**

8.11 AXDS-Composition1

Set of multi-media objects for distribution and production from database, different set of compositional rules and Selections of relevant objects. – **Any of the samples reported in the DB or kiosk section.**

8.12 AXDS-Composition2

Set of multi-media objects for distribution and production from database, set of rules in the repository collection. – **Any of the samples reported in the DB or kiosk section.**

8.13 AXDS-Composition3

Collection of Composition rules. – This does not refer to any object of the repository as it is not content.

8.14 AXDS-Composition4

Collection of active Composition rules. – This does not refer to any object of the repository as it is not content.

8.15 AXDS-Formatting1

Formatting rules set to active. – This does not refer to any object of the repository as it is not content.

8.16 AXDS-Formatting2

Set of multi-media objects for distribution and production from database, set of rules in the repository collection. – **Any of the samples reported in the DB or kiosk section.**

8.17 AXDS-Formatting3

Collection of formatting rules. – This does not refer to any object of the repository as it is not content.

8.18 AXDS-Formatting4

Collection of active formatting rules. – This does not refer to any object of the repository as it is not content.

8.19 AXDS-Workflow1

An NPD process containing at least one component. – This does not refer to any object of the repository as it is not content.

8.20 AXDS-Workflow2

An NPD process containing at least two components. – This does not refer to any object of the repository as it is not content.

8.21 AXDS-Workflow3

An NPD process containing at least one component plus CPA data. – This does not refer to any object of the repository as it is not content.

8.22 AXDS-Workflow4

A set of NPDs with tasks assigned to at least one user. – This does not refer to any object of the repository as it is not content.

8.23 AXDS-CMS

A selection of content (more than 100) that represents the typical content distributed within AXMEDIS (media types: audio, images, video and [text] documents) with related metadata, coming from different CMSs. – **Any of the samples reported in the DB or kiosk section.**

8.24 AXDS-AXEPPR

The rules to apply for the automatic publication of AXMEDIS objects. – This does not refer to any object of the repository as it is not content.

8.25 AXDS-AXEPLR

The rules to apply for the automatic loading of AXMEDIS objects. – This does not refer to any object of the repository as it is not content.

8.26 AXDS-AXEPAS

An active selection of AXMEDIS objects. – This does not refer to any object of the repository as it is not content.

8.27 AXDS-AXEPP2Pheaders

The headers involved in the P2P handshaking. – This does not refer to any object of the repository as it is not content.

8.28 AXDS-AXEPQH

A set of query Hits. – This does not refer to any object of the repository as it is not content.

8.29 AXDS-P&P1

A set of 10 or more selected test AXMEDIS objects from the AXMEDIS database. – **Any of the samples reported in the DB or kiosk section.**

8.30 AXDS-P&P2

A set of 3 sample Set of rules in the repository collection set of rules (i.e. 3 programmes) in the test repository.

ID	Name		Description			
	pnp-programme-test1.pp		XML P&P Programme (.pp)			
Kind	Size	Format	Owner	Usage		
P&P Programme Rule		XML (.pp)	UNIVLEEDS	Pub.	x	Rest.
Location						
https://cvs.axmedis.org/repos/Application/pnpeditor/doc/test						

Associated resources						
Note						
This is intended for testing requiring formatting and composition sections						

ID	Name		Description			
	pnp-programme-test2.pp		XML P&P Programme (.pp)			
Kind	Size	Format	Owner	Usage		
P&P Programme Rule		XML (.pp)	UNIVLEEDS	Pub.	x	Rest.
Location						
https://cvs.axmedis.org/repos/Application/pnpeditor/doc/test						
Associated resources						
Note						
This is intended for testing for the trials functionalities						

8.31 AXDS-P&P3

In this section, a selection of content (about 100) that represents the typical content distributed within AX-MEDIS (media types: audio, images, video and (text) documents) with related metadata will be selected and used with a set of predefined queries (about 5 for each media type and distribution channel) in order to test and address the scope of the selected/provided content.

ID	Name		Description			
	AXDS-PnP1.pp		Test P&P programme for			
Kind	Size	Format	Owner	Usage		
P&P Programme Rule		XML (.pp)	UNIVLEEDS	Pub.		Rest.
Location						
https://cvs.axmedis.org/repos/Application/pnpengine/doc/test						
Associated resources						
A list of around 100 test content will be selected by using the Query Support interface with the following criteria:						
1. file type = [wav avi ...]						
2. file size = [2MB..5MB 10..12MB >20MB]						
Note						
To be tested on all possible channels						

ID	Name		Description

To be tested on all possible channels					

8.32 AXDS-PTE1

A set of (unprotected) multi-media objects (about 20) ready for protection. A set of corresponding rules specification/description addressing the different protection options available within AXMEDIS. Each option must be covered by at least one specified rule. – **Any of the samples reported in the DB or kiosk section.**

8.33 AXDS-PTE2

A set of (unprotected) multi-media objects (about 20) ready for protection. A set of corresponding (created) rules addressing the different protection options available within AXMEDIS. Each option must be covered by at least one specified rule. – **Any of the samples reported in the DB or kiosk section.**

8.34 AXDS-PIE1

A set of protected and un-protected multi-media objects (about 20) ready for protection. – **Any of the samples reported in the DB or kiosk section.**

8.35 AXDS-ITV1

List of transponders frequencies, set of filenames, extract of log lines to be checked in a successful execution of B2B AXMEDIS Client. – This does not refer to any object of the repository as it is not content.

8.36 AXDS-ITV2

List of files to be configured, parameters to be changed, modules to be installed in the OS. – This does not refer to any object of the repository as it is not content.

8.37 AXDS-ITV3

Set of information needed to check the correct reception of content: location of the storage area where the received content is stored, location of log files tracing the download and decryption of content, examples of regular traced messages. – This does not refer to any object of the repository as it is not content.

8.38 AXDS-ITV4

List of test packages to be visible in the Electronic Program Guide, list containing the position, form of the icons to be visible after installation. – This does not refer to any object of the repository as it is not content.

8.39 AXDS-ITV5

Spectrum Image of the transponder to be pointed, list of Transponder frequencies to be tested, list of PIDs to be visible in the locked frequencies. – This does not refer to any object of the repository as it is not content.

8.40 AXDS-ITVlogin

Login to access to the Opensky database, to be used in test cases. – This does not refer to any object of the repository as it is not content.

8.41 AXDS-ITVloginB

Login to access to the Opensky database as a Distributor, to be used in test cases. – This does not refer to any object of the repository as it is not content.

8.42 AXDS-ITVpreferences

Set of Authorizations and Filters associated to a test login. – This does not refer to any object of the repository as it is not content.

8.43 AXDS-ITVprofile

Set of User profiles to be used in test cases. – This does not refer to any object of the repository as it is not content.

8.44 AXDS-ITVobjects

Set of AXMEDIS Objects, some of which are encrypted, that can be scheduled for transmission, updated, downloaded on the client side. – **Any of the samples reported in the DB or kiosk section.**

8.45 AXDS-ITVpackages

List of packages, some of which are surely present in the Carousel List, others coming from the application of a test user profile, others matching of some key words expressly provided. – This does not refer to any object of the repository as it is not content.

8.46 AXDS-ITVstations

Set of B2B receiving stations and related data, such as whether they are controlled or enabled to receive AXMEDIS Objects or Updates. – This does not refer to any object of the repository as it is not content.

8.47 AXDS-ITVschedule

Schedule parameters used to define transmission of Objects via Push system. – This does not refer to any object of the repository as it is not content.

8.48 AXDS-ITVcredentials

List of credentials. – This does not refer to any object of the repository as it is not content.

8.49 AXDS-ITVlicences

Set of licencesID. – This does not refer to any object of the repository as it is not content.

8.50 AXDS-ITVpayments

Accepted form of payment to acquire licences. – This does not refer to any object of the repository as it is not content.

8.51 AXDS-ITVchannels

Set of AXMEDIS channels made of AXMEDIS objects composition. – **Any of the samples reported in the DB or kiosk section.**

8.52 AXDS-AXCS1

A group of at least 30 representative AXCS related data (see pertinent database structure and Use Case). The included data should be the most various as possible, containing a 30% of null, inconsistent, duplicated and data-type critical data (i.e. for example 0 for numeric data type to be tested in mathematic division operand). – This does not refer to any object of the repository as it is not content.

8.53 AXDS-AXCS2

A group of at least 30 representative Tool/Device related data (see pertinent database structure and Use Case). The included data should be the most various as possible, containing a 30% of null, inconsistent, duplicated and data-type critical data (i.e. for example 0 for numeric data type to be tested in mathematic division operand). – This does not refer to any object of the repository as it is not content.

8.54 AXDS-AXCS3

A group of at least 30 representative Objects related data (see pertinent database structure and Use Case). The included data should be the most various as possible. – This does not refer to any object of the repository as it is not content.

8.55 AXDS-AXCS4

A group of at least 30 representative Object related data (see pertinent database structure and Use Case). The included data should be the most various as possible, containing a 30% of null, inconsistent, duplicated and data-type critical data (i.e. for example 0 for numeric data type to be tested in mathematic division operand). Note that at least a 50% of data included in the present data set should be also included in AXDS-AXCS3. – This does not refer to any object of the repository as it is not content.

8.56 AXDS-AXCS5

A group of at least 30 representative Object usage related data (see pertinent database structure and Use Case). The included data should be the most various as possible, containing a 30% of null, inconsistent, duplicated and data-type critical data (i.e. for example 0 for numeric data type to be tested in mathematic division operand). Note that at least a 80% of data included in the present data set should be related to Objects included in AXDS-AXCS3. – This does not refer to any object of the repository as it is not content.

8.57 AXDS-AXCS6

A group of at least 30 representative AXCS related data (see pertinent database structure and Use Case). The included data should be the most various as possible. – This does not refer to any object of the repository as it is not content.

8.58 AXDS-AXCS7

A group of at least 30 representative Users related data (see pertinent database structure and Use Case). The included data should be the most various as possible, containing a 30% of null, inconsistent, duplicated and data-type critical data (i.e. for example 0 for numeric data type to be tested in mathematic division operand). – This does not refer to any object of the repository as it is not content.

8.59 AXDS-AXCS8

A group of at least 30 representative Users related data (see pertinent database structure and Use Case). The included data should be the most various as possible. – This does not refer to any object of the repository as it is not content.

8.60 AXDS-AXCS9

A group of at least 30 passwords random generated. Password length should be the most various as possible and containing a 30% of null and data-type critical data (i.e. for example 0 for numeric data type to be tested in mathematic division operand). – This does not refer to any object of the repository as it is not content.

8.61 AXDS-OLDGen1

A set of 20 ObjectID's and associated information. – This does not refer to any object of the repository as it is not content.

8.62 AXDS-Supervisor1

A group of 20 user identifier (AXUID). This information does not relate to any content described in this document. The AXUID will have the format described in the corresponding database, and they should uniquely identify users inside AXMEDIS system.

8.63 AXDS-Supervisor2

A group of 20 tool identifiers (AXTID). This information does not relate to any content described in this document. The AXTID will have the format described in the corresponding database, and they should uniquely identify tools inside AXMEDIS system.

8.64 AXDS-CertVer1 (Full data set)

A group of at least 20 sets that include: user identifier (AXUID), Tool Identifier (AXTID), Tool fingerprint, Device fingerprint, Tool operation history and Tool operation history fingerprint. This information does not relate to any content described in this document. The different identifiers will have the format described in the corresponding database and they should uniquely identify users and tools inside the AXMEDIS system. Tool and device fingerprint are calculated by software modules based on the corresponding parameters. Tool operation history contains information about operations performed by a user over content with a specific tool and the tool fingerprint is calculated using previous operations performed and the last one reported.

8.65 AXDS-CertVer2 (Subset 1)

A group of at least 20 sets that include: user identifier (AXUID) and Device fingerprint. This information does not relate to any content described in this document. The AXUID identifier has the format described in the corresponding database and it uniquely identifies users inside the AXMEDIS system. Device fingerprint is calculated by software modules based on the corresponding parameters.

8.66 AXDS-CertVer3 (Subset 2)

A group of at least 20 sets that include: user identifier (AXUID), Tool Identifier (AXTID), Tool fingerprint and Device fingerprint. This information does not relate to any content described in this document. The different identifiers will have the format described in the corresponding database and they should uniquely identify users and tools inside the AXMEDIS system. Tool and device fingerprint are calculated by software modules based on the corresponding parameters.

8.67 AXDS-ACCREP1

A group of at least 100 action-logs chosen with the following criteria: (i) they must be related to at least 10 different users; (ii) they must be related to at least 10 different AXMEDIS objects. The list of objects and user they refer to, must be known. – This does not refer to any object of the repository as it is not content.

8.68 AXDS-DRMSupport1

A group of at least 25 sets with information related with personal data from the license issuer and license petitioner, right(s) to be granted, resource over which the rights are granted, conditions of use.

- UID (issuer)
- UID (grantee)
- right(s)
 - AXOID
 - *validityInterval
 - *countLimit
 - *validityRegion
 - *feeInformation
 - *adaptationRules

* Optional fields

This information does not relate to any content described in this document, as they do not define their AXOID for the moment (this will happen when they are effectively inserted into the corresponding database).

8.69 AXDS-DRMSupport2

A group of at least 25 sets with licenseID (existing in license DB), the UID (user identifier) of the authorisation petitioner, right to be authorised and resource identifier over which the action has to be taken.

- UID (petitioner)
- right
- AXOID
- *LicenseID

* Optional fields

This information does not relate to any content described in this document, as they do not define their AXOID for the moment (this will happen when they are effectively inserted into the corresponding database).

8.70 AXDS-DRMSupport3

A group of at least 10 sets with two or more licenseID (existing in license DB for creating a new object), personal data from the license issuer and license petitioner, right(s) to be granted, resource over which the rights are granted, conditions of use.

- LicenseID's (two or more)
- UID (issuer)
- UID (grantee)
- right(s)
 - AXOID
 - *validityInterval
 - *countLimit
 - *validityRegion
 - *feeInformation
 - *adaptationRules

* Optional fields

This information does not relate to any content described in this document, as they do not define their AXOID for the moment (this will happen when they are effectively inserted into the corresponding database).

8.71 AXDS-DRMSupport4

A group of at least 15 licenses (stored by the user or in the central license DB) that are capable of being migrated from one device to another.

This information does not relate to any content described in this document, as the licenses will reference content instead of containing it. A license is given as example.

Sample license:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<r:license xmlns:dsig="http://www.w3.org/2000/09/xmldsig#" xmlns:mx="urn:mpeg:mpeg21:2003:01-REL-MX-NS"
xmlns:r="urn:mpeg:mpeg21:2003:01-REL-R-NS" xmlns:sx="urn:mpeg:mpeg21:2003:01-REL-SX-NS"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:schemaLocation="urn:mpeg:mpeg21:2003:01-REL-R-NS
../schemas/rel-r.xsd urn:mpeg:mpeg21:2003:01-REL-SX-NS ../schemas/rel-sx.xsd urn:mpeg:mpeg21:2003:01-REL-MX-NS
../schemas/rel-mx.xsd">
  <r:grantGroup>
    <r:grant>
      <r:keyHolder>
        <r:info>
          <dsig:keyName>AXUID-1234</dsig:keyName>
        </r:info>
      </r:keyHolder>
      <mx:diminish/>
      <mx:diReference>
        <mx:identifier>AXOID-0001</mx:identifier>
      </mx:diReference>
      <r:allConditions>
        <r:validityInterval>
          <r:notBefore>2005-09-01T00:00:00</r:notBefore>
          <r:notAfter>2005-12-31T00:00:00</r:notAfter>
        </r:validityInterval>
        <sx:feePerUse>
          <sx:rate>
            <sx:amount>3</sx:amount>
          </sx:rate>
        </sx:feePerUse>
      </r:allConditions>
    </r:grant>
  </r:grantGroup>
  <r:issuer>
    <r:keyHolder>
      <r:info>
        <dsig:KeyName>AXUID-7891</dsig:KeyName>
      </r:info>
    </r:keyHolder>
  </r:issuer>
</r:license>
```

8.72 AXDS-DRMSupport5

A group of at least 15 sets of AXMEDIS object, Symmetric key and Cryptographic information. In principle, any digital file can be symmetrically encrypted, but it should be better to start with small files. The symmetric key is generated by the key generator and the cryptographic information involves the algorithm used to perform the encryption / decryption, key length, etc. They depend on the algorithm used.

8.73 AXDS-DRMSupport6

A group of at least 15 sets of AXMEDIS object, Symmetric key, Cryptographic information and license(s). In principle, any digital file can be symmetrically encrypted, but it should be better to start with small files. The symmetric key is generated by the key generator and the cryptographic information involves the algorithm used to perform the encryption / decryption, key length, etc. They depend on the algorithm used. As license, AXDS-DRMSupport4 example can be considered.

8.74 AXDS-DRMSupport7

- LicenseID's (two or more)
- UID (issuer)
- UID (grantee)
- right(s)
 - AXOID
 - *validityInterval
 - *countLimit
 - *validityRegion
 - *feeInformation
 - *adaptationRules

* Optional fields

This information does not relate to any content described in this document, as they do not define their AXOID for the moment (this will happen when they are effectively inserted into the corresponding database).

8.75 AXDS-DRMSupport8

A group of at least 10 sets with two or more licenseID (existing in license DB for creating a new object), personal data from the license issuer and license petitioner, right(s) to be granted, resource over which the rights are granted, conditions of use. Business rule includes time or data consumption.

- LicenseID's (two or more)
- UID (issuer)
- UID (grantee)
- right(s)
 - AXOID
 - *validityInterval
 - *countLimit
 - *validityRegion
 - *feeInformation
 - *adaptationRules

* Optional fields

This information does not relate to any content described in this document, as they do not define their AXOID for the moment (this will happen when they are effectively inserted into the corresponding database).

8.76 AXDS-PMS1

An AXMEDIS object, Protection information (including keys). – **Any of the samples reported in the DB or kiosk section.**

8.77 AXDS-PMS2

Protection information related to an AXMEDIS Object. – This does not refer to any object of the repository as it is not content.

8.78 AXDS-RET1

A group of at least 20 different licenses of every REL supported. These licenses should include different type of content and rights, valid and not valid: no limitations to that. For the moment, only MPEG-21 REL is supporting. During the development of the project, and, due to the implementation of the corresponding tools, it is foreseen to support also ODRL. An example of license expressed in MPEG-21 REL is given in AXDS-DRM4.

8.79 AXDS-ENCDEC1

A set of 15 symmetric and asymmetric key (key pair) and its associated cryptographic information. Asymmetric keys are generated by the corresponding tool. They usually involve two keys and several parameters that depend on the algorithm to which the keys correspond. The algorithm and the length of the keys is part of the cryptographic information, that depends on the keys used.

8.80 AXDS-PIMulti

A set of at least 5 AXMEDIS Objects containing audio and video, at different sampling rates and frame sizes. – **Any of the samples reported in the DB or kiosk section.**

8.81 AXDS-PIVid

A set of at least 5 AXMEDIS Objects containing video content with at least two different frame sizes (a high quality like TV size and a lower quality). – **Any of the samples reported in the DB or kiosk section.**

8.82 AXDS-PIAu

A set of at least 5 AXMEDIS Objects containing audio content with at least two different sampling rates (a high quality like CD and a lower quality). – **Any of the samples reported in the DB or kiosk section.**

8.83 AXDS-MCProject

The Media Club project definition data – typically running on a remote Xaura DB installation. – This does not refer to any object of the repository as it is not content.

8.84 AXDS-MCProducer

The Media Club data definition of back-office users and permissions – typically running on a remote Xaura DB installation. – This does not refer to any object of the repository as it is not content.

8.85 AXDS-MCObject

Set of AXMEDIS Objects, tailored to be managed by the Media Club, some of which are encrypted, that can be updated, downloaded or streamed on the client side. – **Any of the samples reported in the DB or kiosk section.**

8.86 AXDS-MCShop

The Media Club data definition for the shop. – This does not refer to any object of the repository as it is not content.

8.87 AXDS-MCPayMethod

The Media Club data specifying all available payment methods. – This does not refer to any object of the repository as it is not content.

8.88 AXDS-MCTransaction

The Media Club transaction data. – This does not refer to any object of the repository as it is not content.

8.89 AXDS-MCTestUser

1. A test login to be used in each test case.
2. test User e-mail
3. List of Authorizations associated with the test login.
4. Sample of user profile to be submitted.
5. wallet
6. gift certificate

This does not refer to any object of the repository as it is not content.

8.90 AXDS-Video

A selection of content (more than 10) that represents the typical video content distributed within AXMEDIS with related metadata, coming from different CMSs. Some Items will include a preview. – **Any of the samples reported in the DB or kiosk section.**

8.91 AXDS-PCDist1

An AXMEDIS Protected Object. – **Any of the samples reported in the DB or kiosk section.**

8.92 AXDS-Kiosk1

- AXMEDIS object stored in the local AXDBM
 - Sample 1 = Image + Text
 - Sample 2 = Image + Audio
 - Sample 3 = Video + Audio
 - Sample 4 = Text + Image + Audio
 - Sample 5 = Audio + Text
 - Sample 6 = Animation + Audio + Text

Samples 2,4 and 5 will be produced in project experimentation due course starting from text and images available in ILABS collection by (automatic) speaking of reported text and then composed using AXMEDIS tools of ILABS proprietary system.

Samples 3 and 6 will be produced in project experimentation due course starting from other partners content provide for the purpose.

Associated resources						
Note						

8.94 AXDS-Kiosk3

- Top-ten AXMEDIS objects stored locally
 - any of the previously mentioned objects or: Sample 1- 14

Basically this corresponds to any of the provided object listed in the partner section that will have been transformed into an AXMEDIS object and that will be meeting kiosk trial requirements.

8.95 AXDS-Kiosk4

- The AXMEDIS object stored in the local fruition device
 - any of the previously mentioned objects or: Sample 1- 14

Basically this corresponds to any of the provided object listed in the partner section that will have been transformed into an AXMEDIS object and that will be meeting kiosk trial requirements.

8.96 AXDS-Kiosk5

AXMEDIS Certifier & Supervisor user management data. This is service data and does not refer to any specific content reported in the deliverable or stored in the object database. It will represent part of the kiosk configuration data.

8.97 AXDS-Kiosk6

Licenses of the AXMEDIS governed object. Being licenses embedded into governed object this data set will simply be represented by the set of object (governed) hold in the kiosk database and therefore already described in previous sections.

8.98 AXDS-Kiosk7

Composition & formatting rules. This is service data and does not refer to any specific content reported in the deliverable or stored in the object database. It will represent part of the kiosk configuration data.

8.99 AXDS-Kiosk8

DRM rules. This is service data and does not refer to any specific content reported in the deliverable or stored in the object database. It will represent part of the kiosk configuration data.

8.100 AXDS-Kiosk9

Selected Content List for Kiosk. This is service data and does not refer to any specific content reported in the deliverable or stored in the object database. It will represent part of the kiosk configuration data.

8.101 AXDS-Kiosk10

The kiosk applications. This is service data and does not refer to any specific content reported in the deliverable or stored in the object database. It will represent part of the kiosk configuration data.

8.102 AXDS-Kiosk11

The kiosk procedures. This is service data and does not refer to any specific content reported in the deliverable or stored in the object database. It will represent part of the kiosk configuration data.

8.103 AXDS-Kiosk12

The kiosk catalogue. This is service data and does not refer to any specific content reported in the deliverable or stored in the object database. It will represent part of the kiosk configuration data.

8.104 AXDS-Kiosk13

The kiosk local user management data. This is service data and does not refer to any specific content reported in the deliverable or stored in the object database. It will represent part of the kiosk configuration data.

9 Appendix 1- Schema MAG 2.0ec

Please note the new updated XML MAG schema (versione 2.0) which will be used for metadata of ANSC resources: http://www.iccu.sbn.it/MAG/MAG_2.0/MAG_sito_Schema/mag_2_0_ec.html
