

**AXMEDIS Tutorial
on Content Processing**

Version 1.4
December 2006

Martin Schmucker – Fraunhofer Institute for Computer Graphics Research IGD,
Darmstadt, Germany

Ivan Bruno – Department of Systems and Informatics (DSI-DISIT),
University of Florence, Italy

Maulik Sailor – Intelligent Media Systems & Services (IMSS),
University Reading, United Kingdom

1

**AXMEDIS attacks the challenges of
digital content processing
and distribution**

Automating Production of Cross Media Content
for Multi-channel Distribution

2

Table of Content

- **Tutorial Rationale**
- **Tutorial Objectives & Outcomes**
- **AXMEDIS Content Processing (AXCP) – Part I**
 - ▶ Overview
 - ▶ Automation
 - ▶ Life-Cycle
 - ▶ Core Functionality
 - ▶ Extended Functionality

3

Table of Content (II)

- **AXMEDIS Content Processing (AXCP) – Part II**
 - ▶ AXCP Engine
 - ▶ AXCP Grid
 - ▶ Usage Scenarios
- **Summary, Conclusion and Outlook**
- **Discussion, Questions and Answers**

4

Tutorial Presentation

- **Rationale**
 - ▶ Recommended: General Tutorial
 - ▶ Focus: Automatic Content Processing
 - Underlying basics concepts
 - Usage examples of tools
 - ▶ Discussion of limits and constraints
- **Documents are available at <http://www.axmedis.org>**

5

Tutorial Presentation (II)

- **Intended audience**
 - ▶ Decision makers
 - ▶ Technical managers
 - ▶ Programmers
 - ▶ People in the areas of
 - Content production
 - Content distribution and content protection
- **Prerequisites**
 - ▶ Basic knowledge of production cycle and tools
 - ▶ Basic knowledge of distribution and protection tools

6

Tutorial Objectives

- Recall overall automatic content processing process
- Overview on individual tools
- AXMEDIS content processing framework usage know-how
- Interaction with tools
- Description of usage scenarios

7

Tutorial Outcomes

- How to use content processing tools in the AXMEDIS framework
- How to automate content production and processing using AXMEDIS
- Interaction of workflow and content processing
- Distribution of workload by using the AXMEDIS GRID distributed environment

8

AXMEDIS Tutorial on Content Processing - Part I

- Current Challenges and Key Issues
- AXMEDIS General Overview
- AXMEDIS Content Processing

9

Current Challenges

- Very fast growing digital-content market
- Major limitations include:
 - ▶ Convergence of the media, interoperability of content
 - ▶ DRM applications and introduction in several distribution channel
 - ▶ Massive processing of content processing and distribution
- Real challenges that are currently being discovered
 - ▶ Business-to-Consumer Scenarios (B2C)
 - ▶ Business-To-Business Scenarios (B2B)
- Required: innovative means for various scenarios

10

Key Issue: Flexibility

- **Devices and content delivery formats are not static**
 - ▶ Emerging devices and formats
 - ▶ Dynamic market in terms of possibilities and content types and formats
- **Required: Flexible Software Tools**
 - ▶ Support of numerous content types and formats
 - ▶ Support of different devices

11

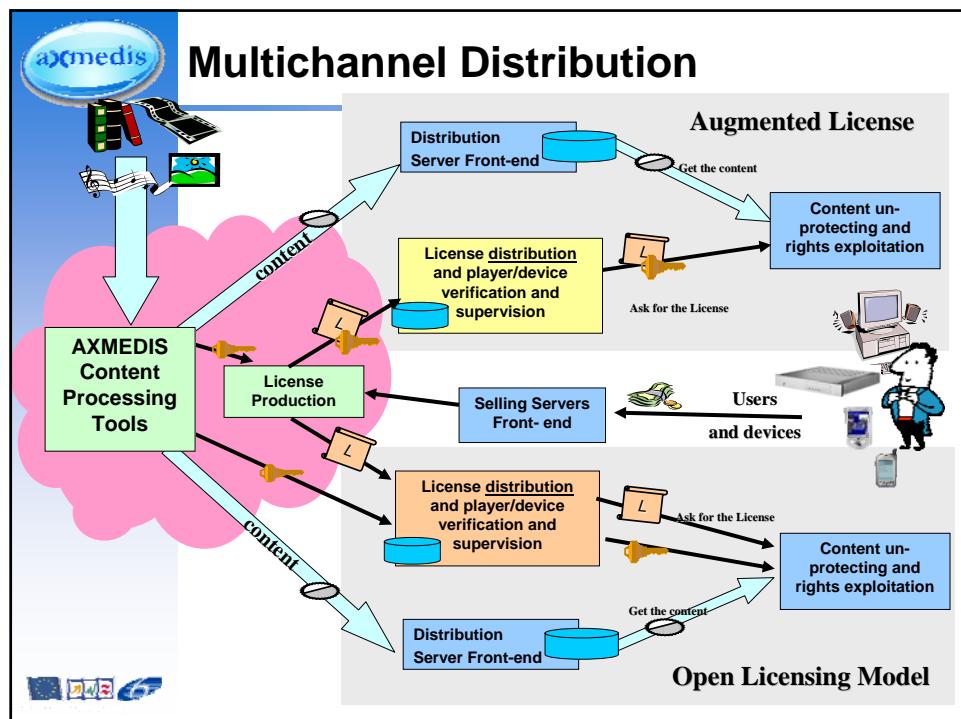

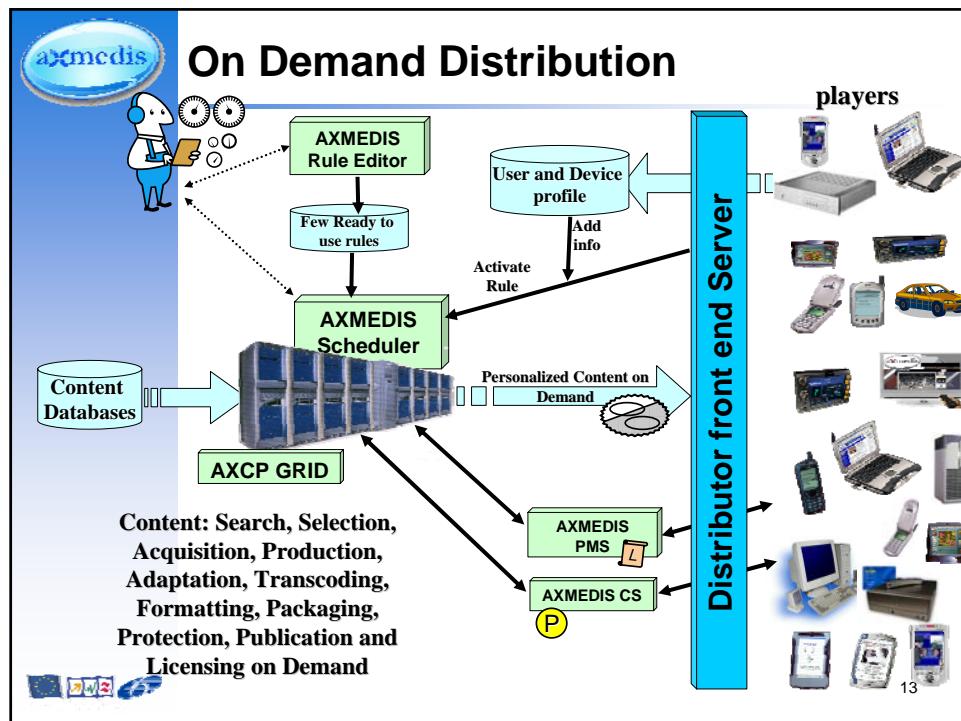

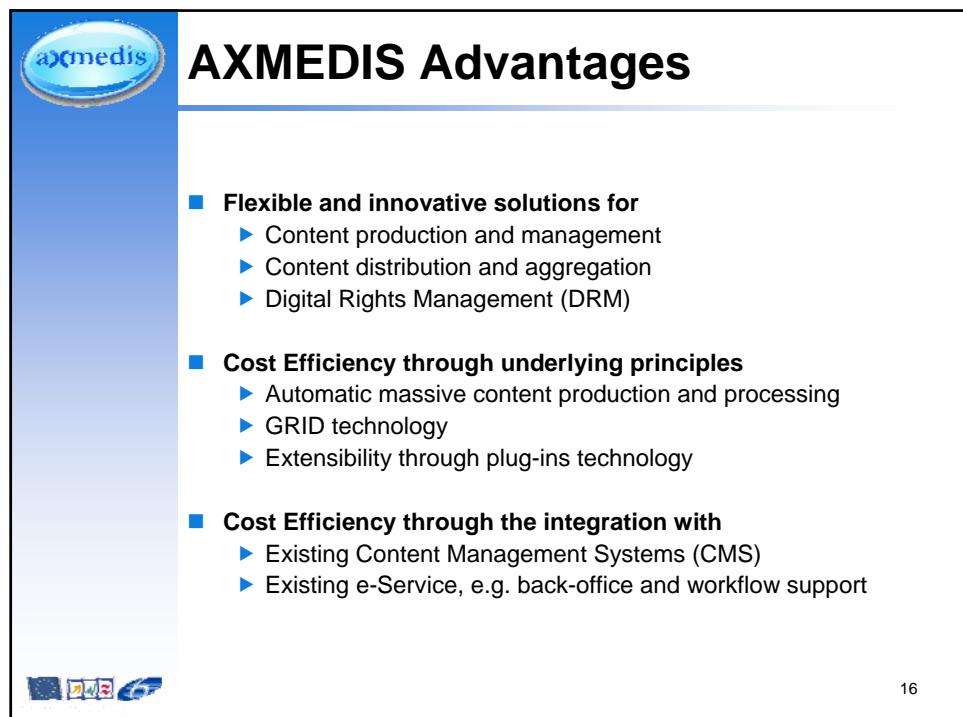

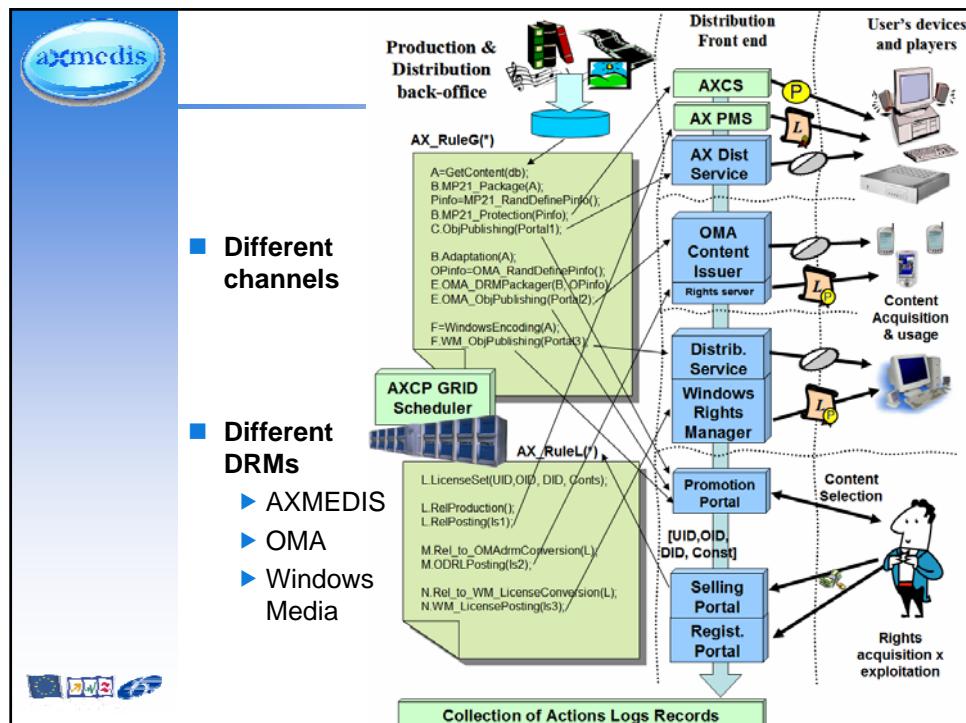

Key Issue: Automated Processing

- **On-demand distribution:**
 - ▶ Production on the basis of requests and profiling (user device, network, etc.), etc.
 - ▶ Request depending adaptation and processing
- **Multi-channel distribution**
 - ▶ Differing receiving devices
 - ▶ Differing distribution modalities
 - ▶ Multiple interoperable DRMs, license chain processing
- **Content monitoring**
 - ▶ Broadcast channels and networks,
 - ▶ Peer-To-Peer networks, Websites, etc.

12

AXMEDIS Advantages (II)

- **AXMEDIS Automated Content Processing**
 - ▶ Massive and small scale processing
 - ▶ Locally performed or Workflow controlled
 - ▶ On any kind of Digital Resource not only AXMEDIS objects
- **AXCP Applications for massive processing as**
 - ▶ Production/packaging platform for producers and integrators
 - ▶ Protection of objects, and protection information processing
 - ▶ Transcoding/adaptation platform for distributors
 - ▶ License Production, or as License Sever/processor
 - ▶ etc.

17

Summary: AXMEDIS

- **Intelligent and flexible solution**
 - ▶ Automated content processing and production
 - ▶ Efficient usage of available resources
 - ▶ Interoperability with existing infrastructure
 - ▶ Automatic provision of new service

18

Content Processing With AXMEDIS

Automation of content processing

19

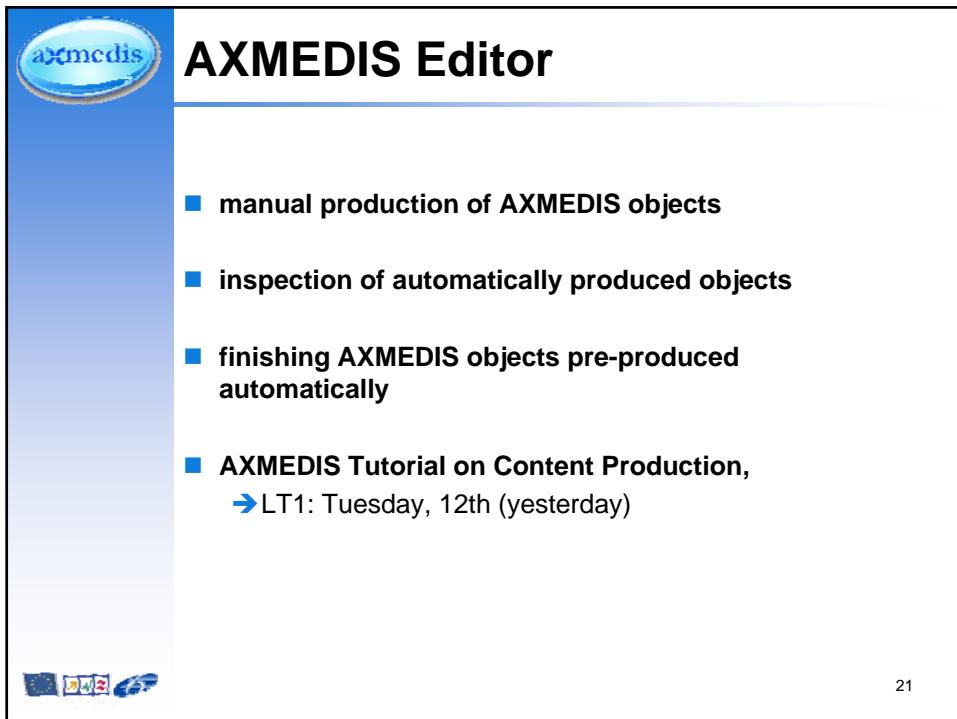

AXMEDIS General Overview

- AXMEDIS Editor
- AXMEDIS Automatic Content Processing
- AXMEDIS Architecture
- AXMEDIS Content Processing

20

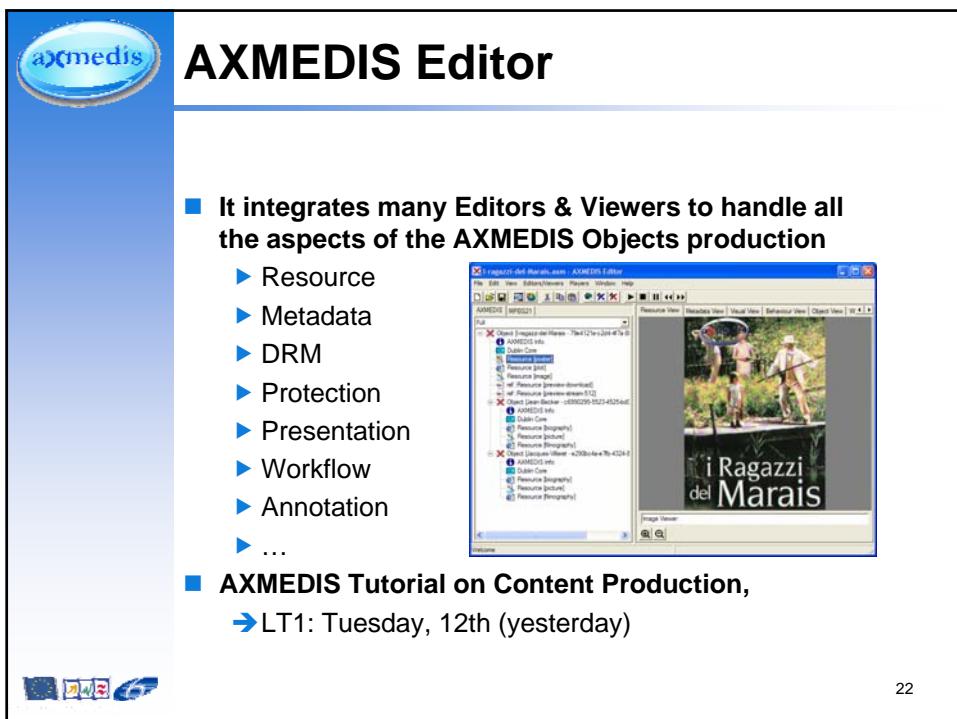

The screenshot shows the AXMEDIS Editor application window. The title bar reads "AXMEDIS Editor". The left sidebar contains a logo and a navigation menu with items like "File", "Edit", "View", "Editor Themes", "Pages", "Preview", and "Help". The main area displays a list of objects under the heading "AXMEDIS Objects". The list includes:

- manual production of AXMEDIS objects
- inspection of automatically produced objects
- finishing AXMEDIS objects pre-produced automatically
- AXMEDIS Tutorial on Content Production,
→ LT1: Tuesday, 12th (yesterday)

At the bottom of the window, there are icons for the European Union flag, a search bar, and other application buttons.

21

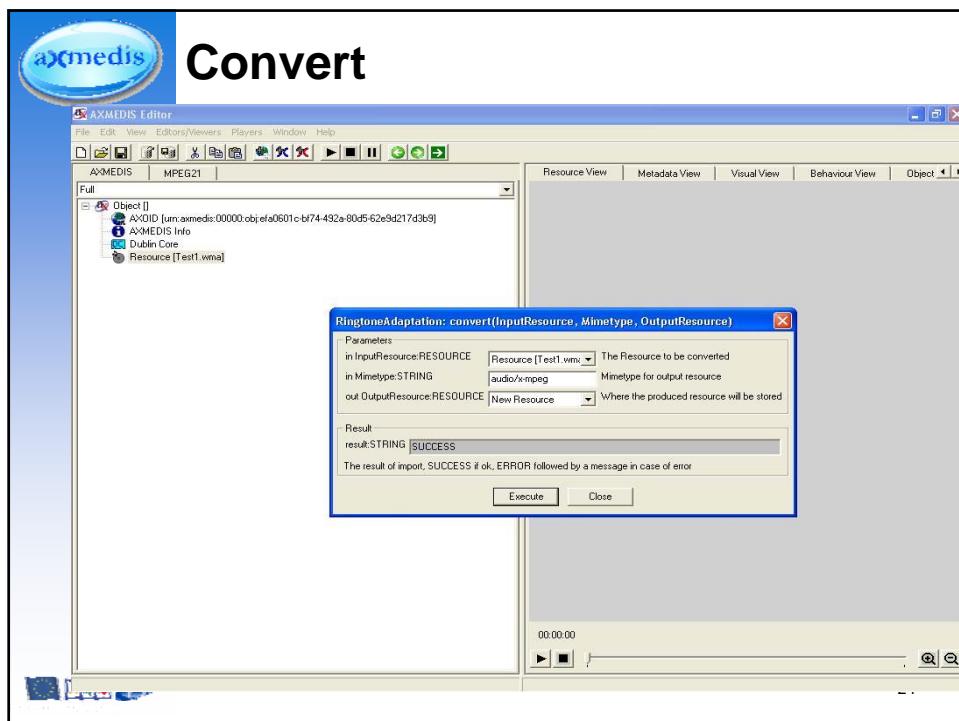

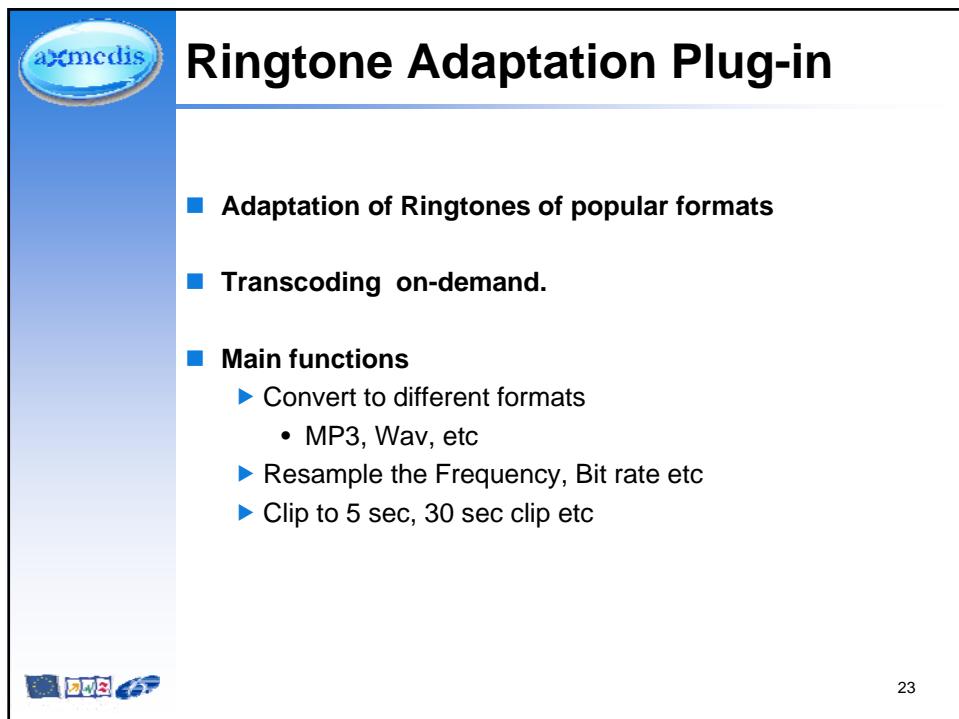

The screenshot shows the AXMEDIS Editor application window. The title bar reads "AXMEDIS Editor". The left sidebar contains a logo and a navigation menu with items like "File", "Edit", "View", "Editor Themes", "Pages", "Preview", and "Help". The main area displays a detailed view of an object. The left pane shows a tree structure of object components, including "AXMEDIS Info", "Resource [Image]", "Resource [Image]", "Object [Image-Header] - 00000000-0000-0000-0000-000000000000", "AXMEDIS Info", "Resource [Image]", "Resource [Image]", and "Object [Image-Header] - a20303c4-e7b1-42d4-8f0e-000000000000". The right pane shows a preview of the object, displaying a photograph of two children and the text "i Ragazzi del Marais".

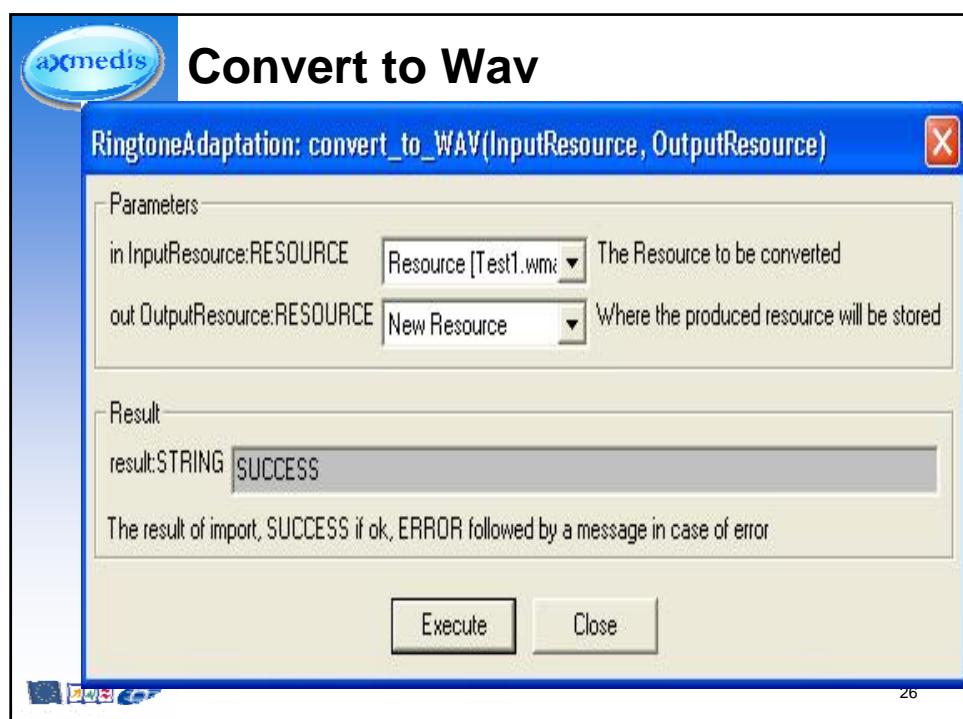

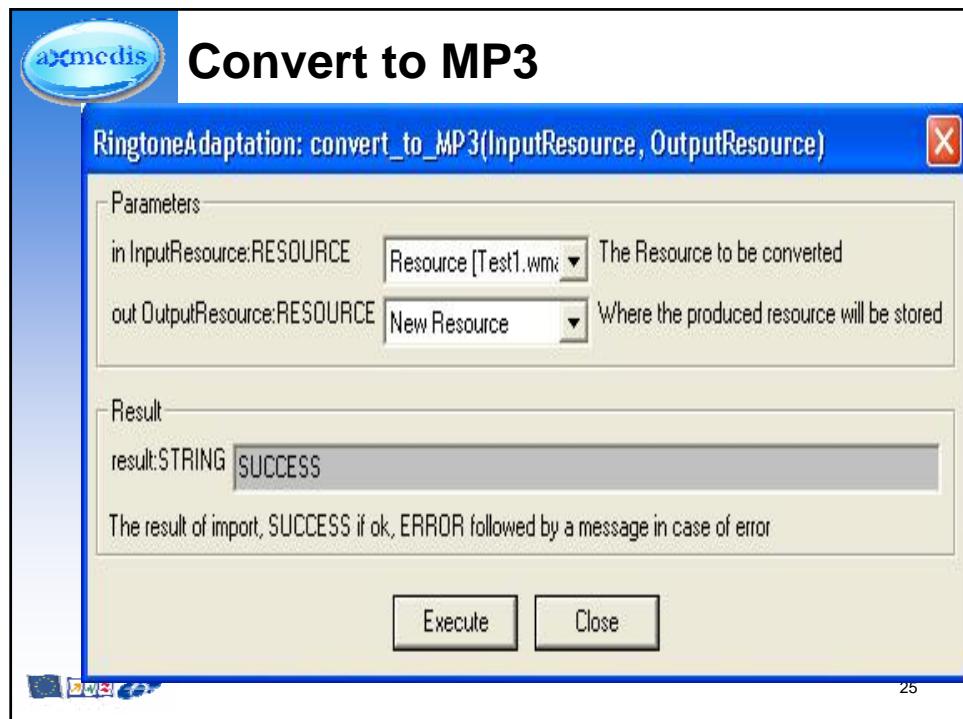

The list of features and tutorials is identical to the one in the previous slide:

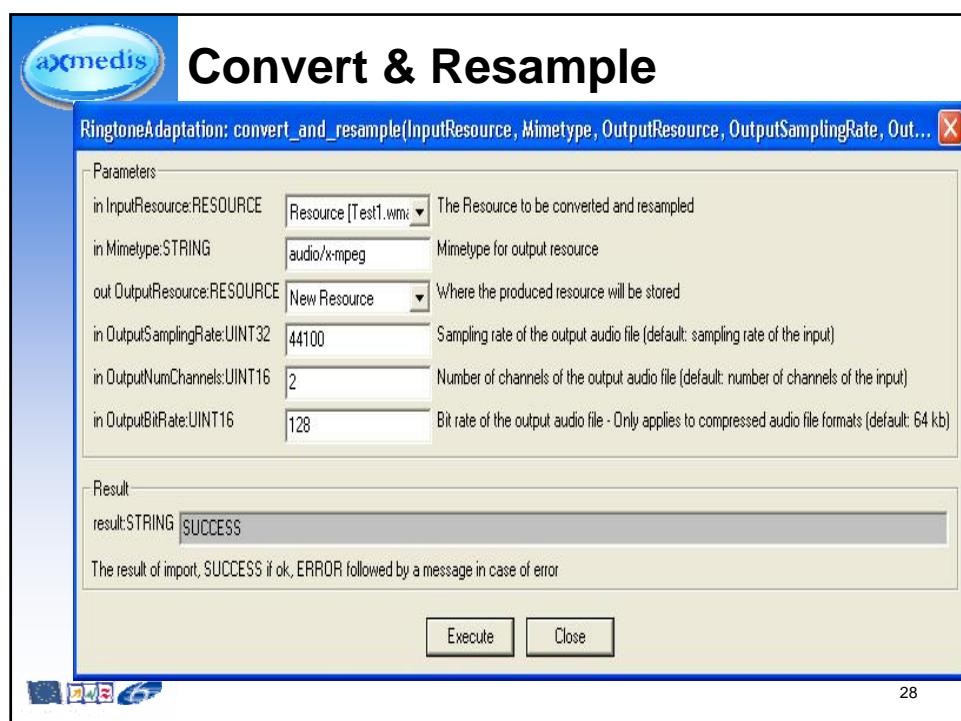

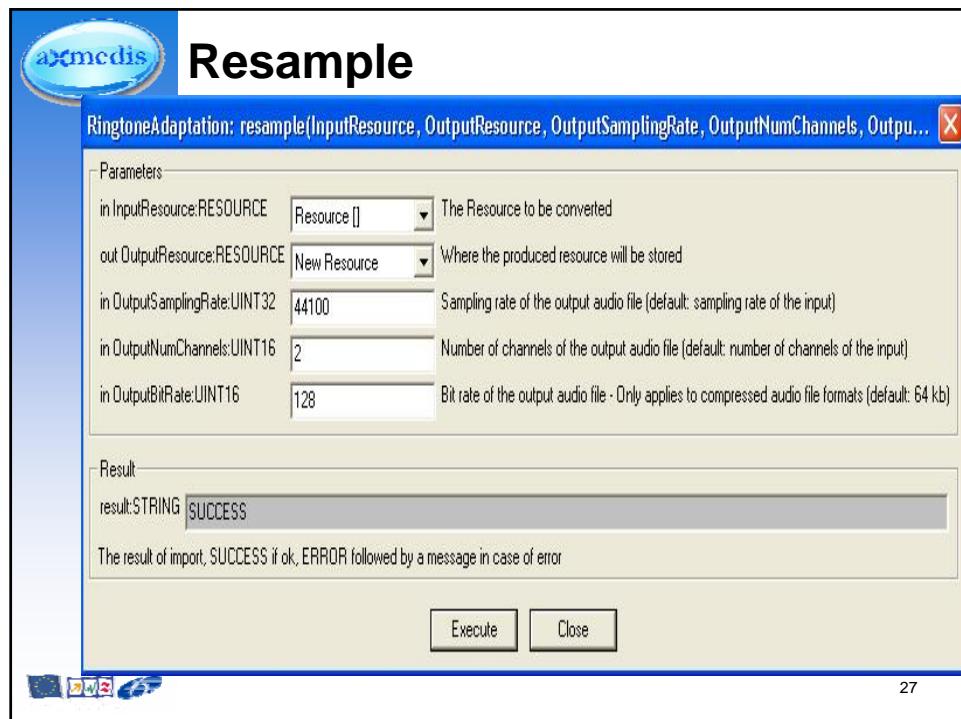

- It integrates many Editors & Viewers to handle all the aspects of the AXMEDIS Objects production
 - ▶ Resource
 - ▶ Metadata
 - ▶ DRM
 - ▶ Protection
 - ▶ Presentation
 - ▶ Workflow
 - ▶ Annotation
 - ▶ ...
- AXMEDIS Tutorial on Content Production,
→ LT1: Tuesday, 12th (yesterday)

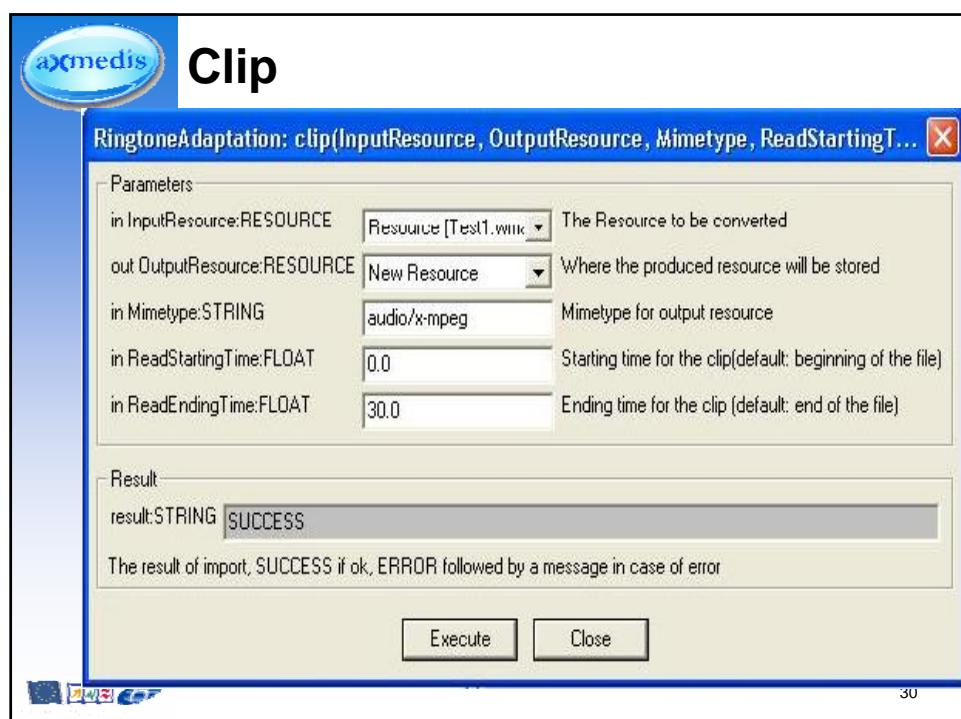

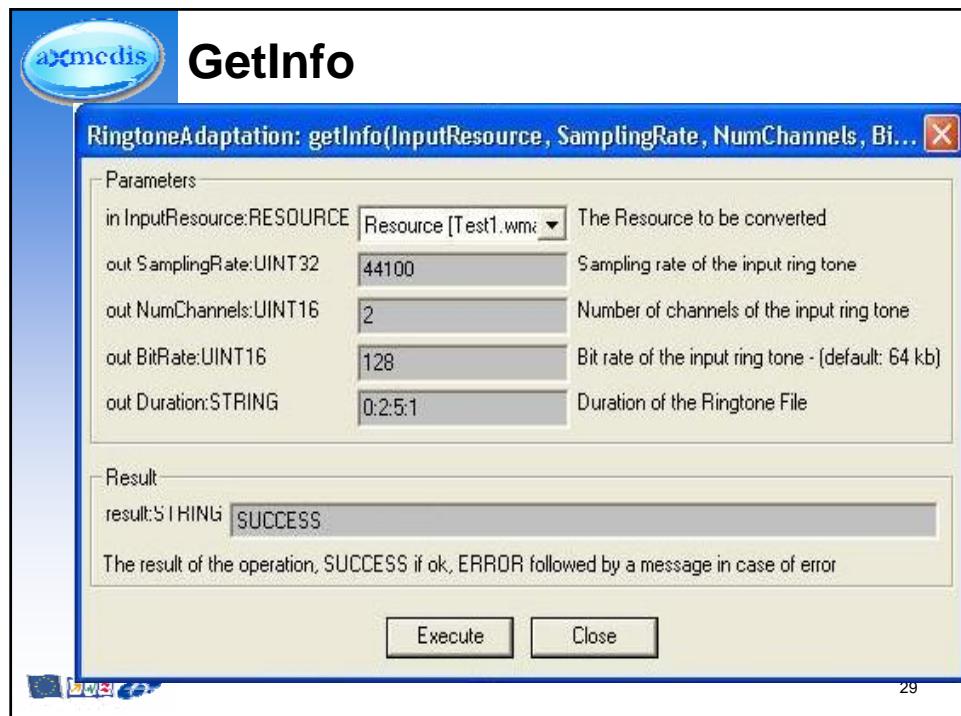

At the bottom of the window, there are icons for the European Union flag, a search bar, and other application buttons.

22

The screenshot shows the AXMEDIS Editor application window. The title bar reads "AXMEDIS Editor". The main area has a toolbar at the top with icons for file operations like Open, Save, Print, and Help. Below the toolbar is a menu bar with File, Edit, View, Editors/Viewers, Players, Window, and Help. The left side features a project tree titled "i Ragazzi-del-Marais.axm". It lists several objects, each with a red X icon indicating they are deleted or inactive. The objects include "AXMEDIS Info", "Dublin Core", "Resource [text]", "Resource [image]", "ref.Resource [review-download]", "ref.Resource [review-stream-512]", "Object [Jean-Becker - c5990299-5523-4525-edf]", "Dublin Core", "Resource [biography]", "Resource [picture]", "Object [Jacques-Villeneuve - e29bca4-e7b-4324-0]", "AXMEDIS Info", "Dublin Core", "Resource [biography]", "Resource [picture]", and "Resource [biography]". On the right side, there is a preview window showing a photograph of three people standing outdoors with a banner in the foreground that says "i Ragazzi del Marais". Below the preview window are tabs for Resource View, Metadata View, Visual View, Behaviour View, and Object View. At the bottom of the preview window, there is an "Image Viewer" section with two small thumbnail images.

■ AXMEDIS Tutorial on Content Production,
→ LT1: Tuesday, December, 12th, 2006 (yesterday)

31

The screenshot shows a slide titled "AXMEDIS Automated Content Processing Tools". The title is centered at the top in a large, bold, black font. Below the title, there is a horizontal line and the text "Available functionalities in the AXMEDIS Framework" in a smaller, gray font. At the bottom of the slide, there is a decorative footer bar featuring the European Union flag, the AXMEDIS logo, and other small icons.

32

AXMEDIS Automated Content Processing Area

- Properties
- Architecture
- AXMEDIS Content Processing Engine
- AXMEDIS GRID

33

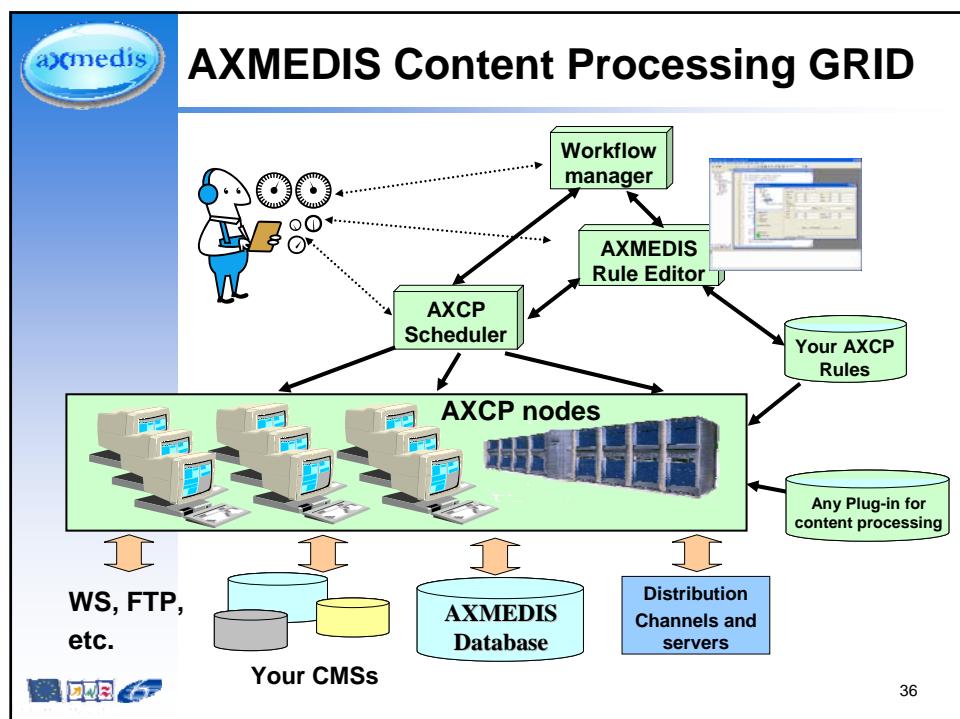

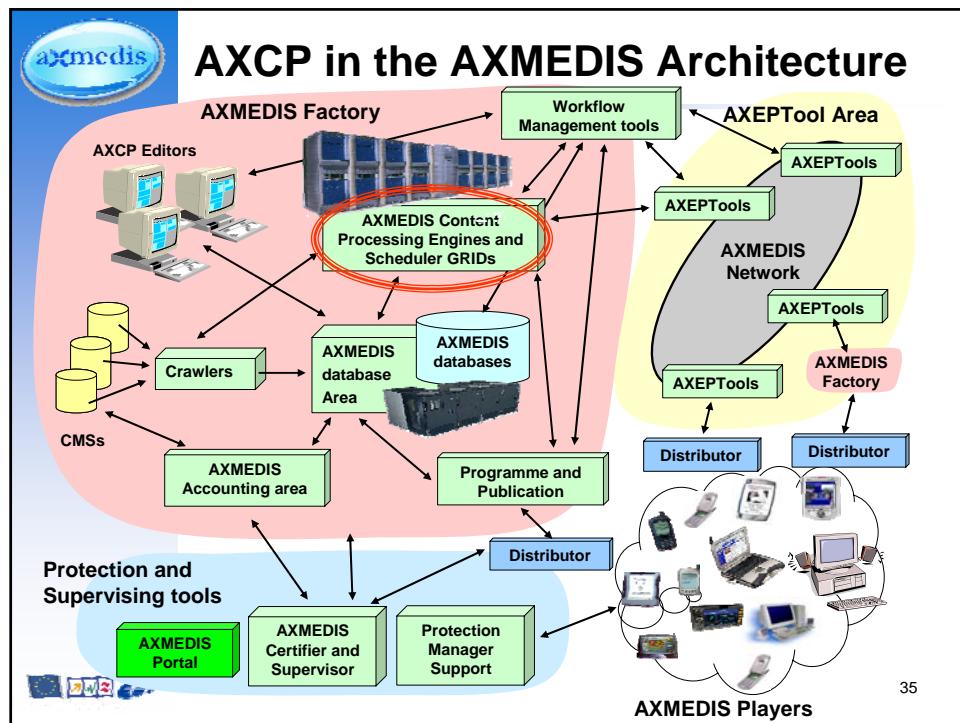

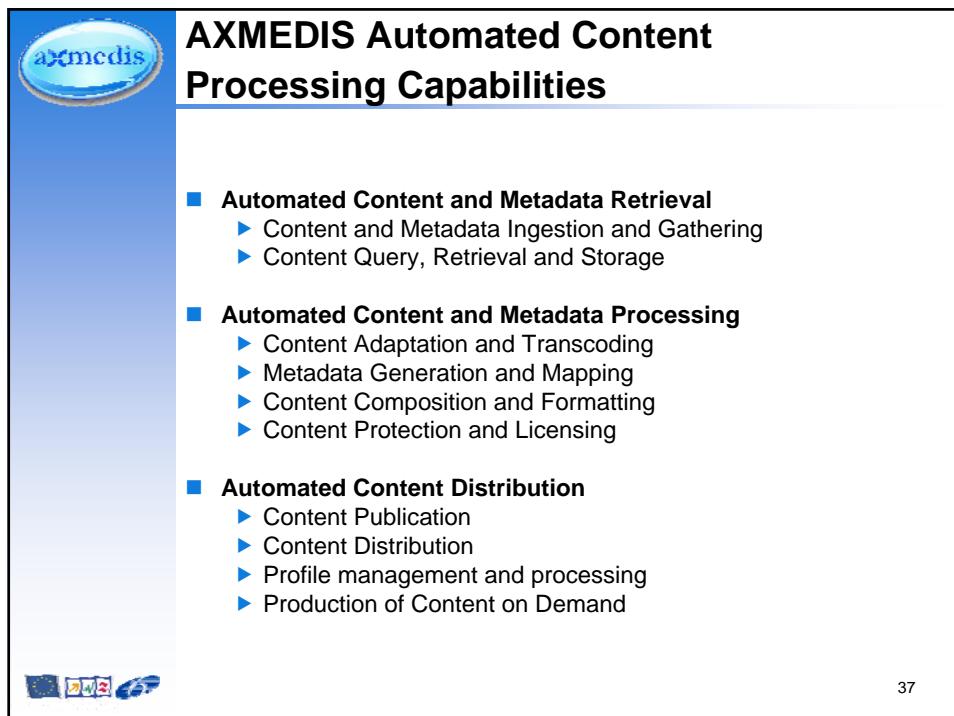

Automatic Content Processing

- Content distribution and production characteristics:
 - ▶ Content lifetime
 - ▶ Demand is time dependent
 - ▶ ...
- Example:
 - ▶ Creating a content for a current event
 - ▶ Now: winter scenario ... started to snow (... or not)
 - ➔ Manual production is (too) time consuming
- How can the AXMEDIS Automatic Content Processing (AXCP) Area support you?
 - ▶ Scalability
 - ▶ Extensibility
 - ➔ Essential functionality to fulfil real world's requirements

34

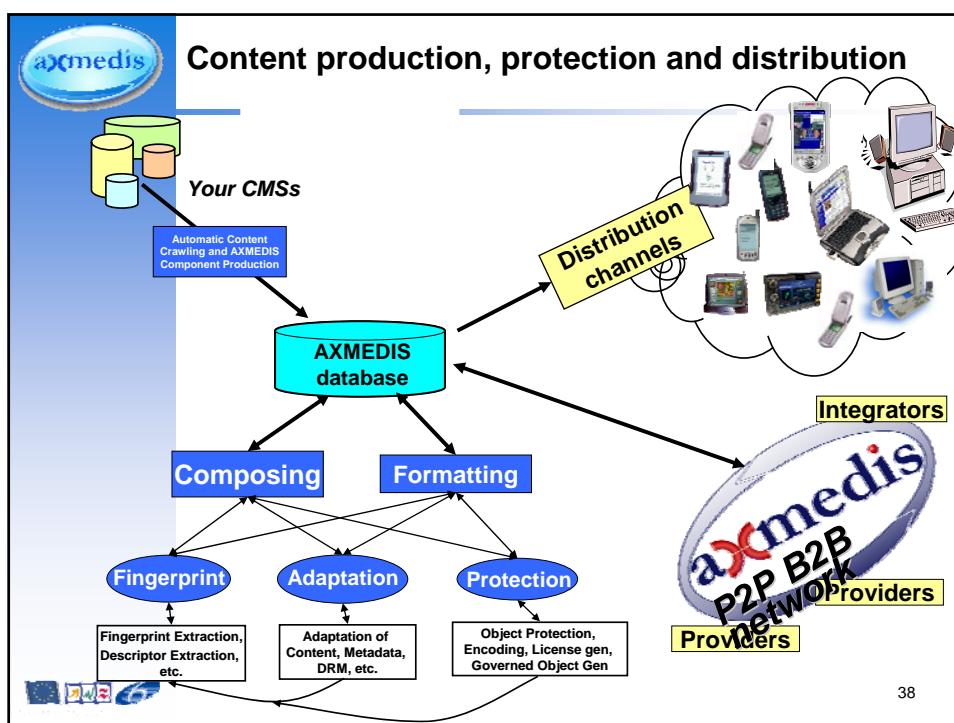

AXMEDIS Automated Content Processing Capabilities

- **Automated Content and Metadata Retrieval**
 - ▶ Content and Metadata Ingestion and Gathering
 - ▶ Content Query, Retrieval and Storage
- **Automated Content and Metadata Processing**
 - ▶ Content Adaptation and Transcoding
 - ▶ Metadata Generation and Mapping
 - ▶ Content Composition and Formatting
 - ▶ Content Protection and Licensing
- **Automated Content Distribution**
 - ▶ Content Publication
 - ▶ Content Distribution
 - ▶ Profile management and processing
 - ▶ Production of Content on Demand

37

Content and Metadata Retrieval

- **Access to numerous existing DBs and CMSs for**
 - ▶ Content and Metadata Ingestion and Gathering
 - ▶ Content Query, Retrieval and Storage
 - ▶ Automatic migration of digital contents
- **Access to several different resources**
 - ▶ File Systems: Win, Linux, MAC, etc.
 - ▶ ODBC, JDBC, etc.
 - ▶ Native DB: DB2, Oracle, MS-SQL, MySQL, etc.
 - ▶ Protocols: IMAP, POP, Z39.50, etc.
 - ▶ XML databases
- **Automation of**
 - ▶ Loading and saving of AXMEDIS objects

39

Content and Metadata Processing

- **Metadata Generation**
 - ▶ Calculation of Low and High Level Descriptors
 - ▶ For AXMEDIS objects and included resources
- **Metadata Mapping**
 - ▶ Managing generic, AXInfo and DublinCore Metadata
- **Content Composition**
 - ▶ Putting together content different kinds of raw assets to create a new digital item
→ AXMEDIS Object (or MPEG-21 format)
 - ▶ Composing different AXMEDIS objects selected from the AXMEDIS database

40

Content and Metadata Processing (II)

- **Content Adaptation and Transcoding**
 - ▶ Adaptation of content (digital item adaptation, DIA)
 - ▶ For distribution via different channels to users' platforms such as i-TV, mobile, PC, etc...
- **Content Formatting**
 - ▶ Modifying digital resources according to a specific format
 - File format and properties
 - ▶ Applying a (content dependent) formatting style
 - graphic layout
 - spatial constraints
 - quality limitations
 - synchronization between audio and images, etc.

41

Content and Metadata Processing (III)

- **Content Protection**
 - ▶ Preventing un-authorized content access
 - ▶ Preventing un-authorized content manipulations
- **Content Licensing**
 - ▶ DRM and License production
 - ▶ DRM and Licence processing
 - ▶ Offline and on-demand services

42

Content Distribution

- **Content Publication**
 - ▶ metadata adaptation and mapping
 - ▶ publication of AXMEDIS objects on external channels in the B2B distribution (AXEPTools)
- **Content Distribution**
 - ▶ AXMEDIS objects distribution via available channels in the B2C scenarios
- **Profile management and processing**
 - ▶ Considering the characteristics of transmission channels and receiving device
- **Production of Content on Demand**
 - ▶ Creating new content upon customer's request

43

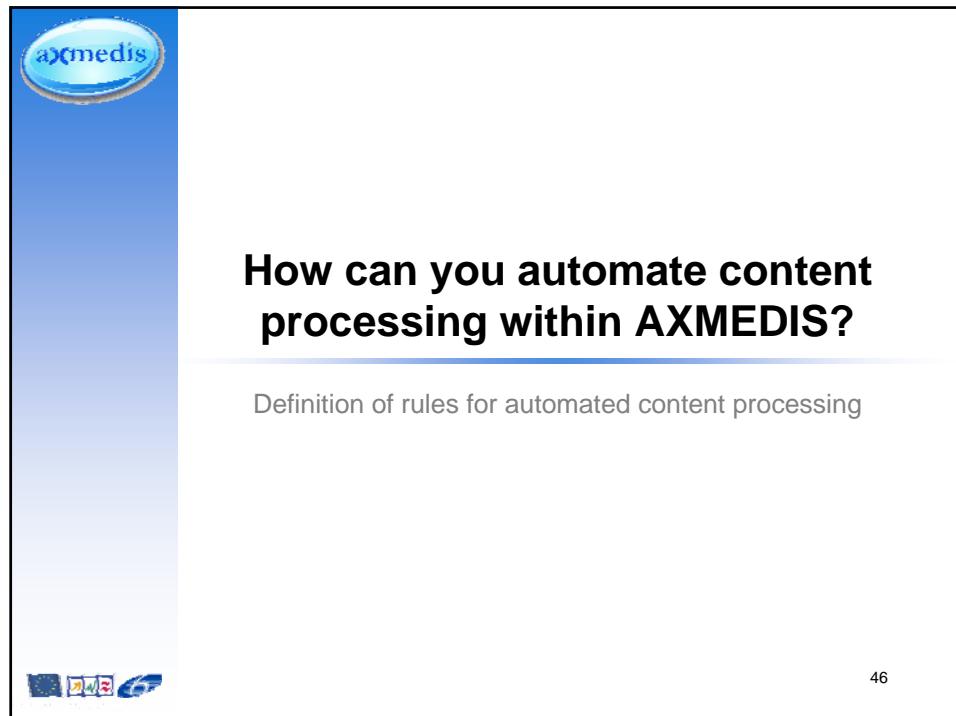

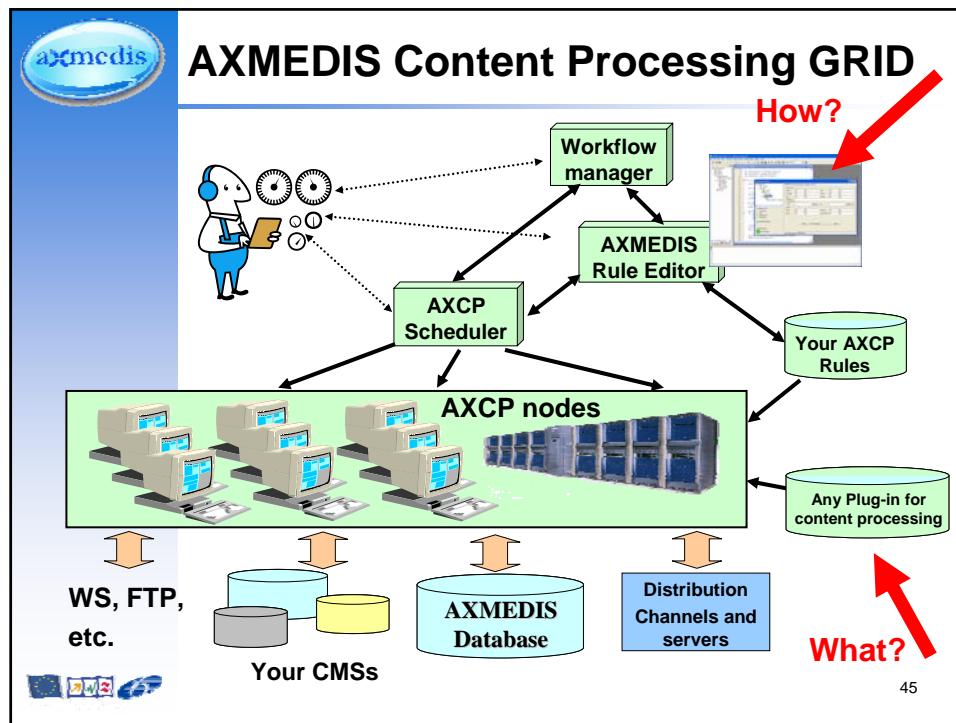

Extensibility

- **Provided functionality is extensible**
- **Plugin Interface**
 - ▶ To include further existing tools
 - ▶ To include future tools
- **Plugin SDK (Software Development Kit)**
 - ▶ For easy integration of your algorithms as plugins
 - ▶ Including documentation and source code examples

44

AXMEDIS Scripting Language

- Rules are expressed in a scripting language
 - ▶ What is a rule?
 - ▶ What can be done with a rule?
 - ▶ How to write, test and finalize a rule?
 - ▶ How to execute a rule?

47

Rules within AXMEDIS

- An AXCP Rule is a scripted procedure:

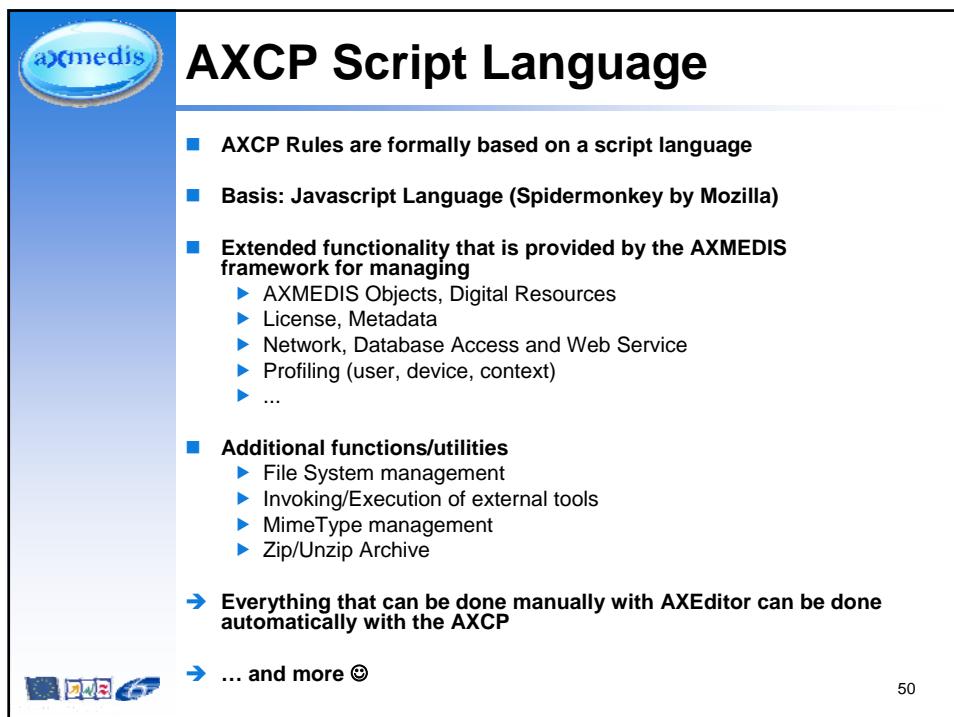

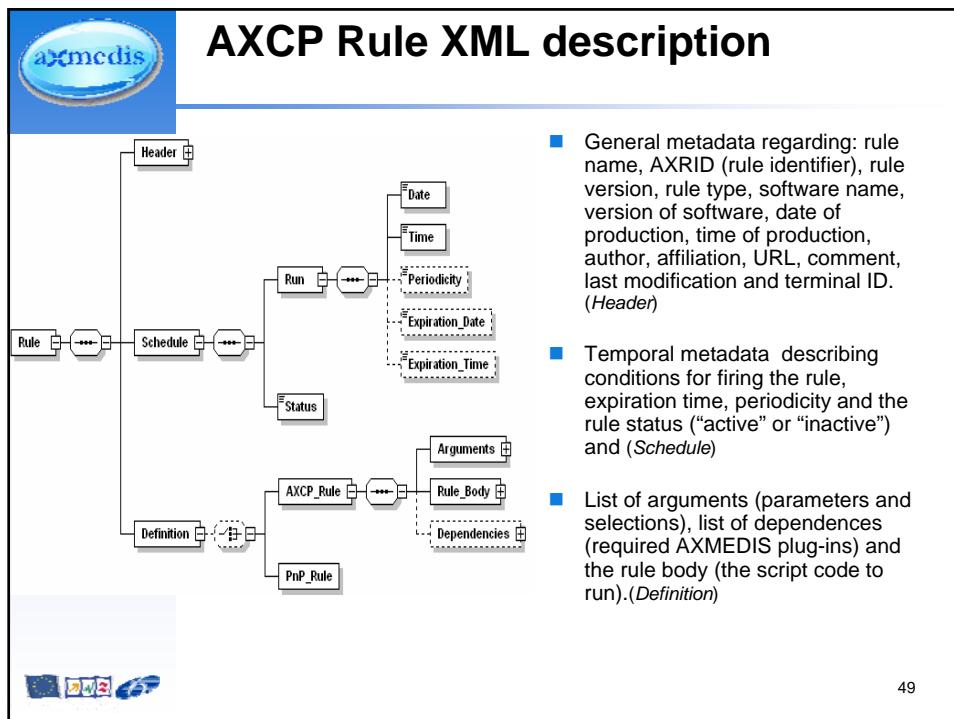

$$R = f(S_1, S_2, \dots, S_n, P_1, \dots, P_m)$$

Where:

- S_i is a database Selection
 - ▶ It is a sequence of queries to be sent to the AXMEDIS Database to retrieve objects IDs;
- P_i is a parameter (basic type as integer, string, Boolean, etc.);
 ▶ For example, coordinates for a formatting, size or value of object collection to be created, destination of the objects, name of the author, etc.
- f is the identifier of rule (name of rule or an ID);
- R is the result of the rule application.
 ▶ It can be a new AXMEDIS object, or a metadata manipulation, the license of an AXMEDIS object, a message to be returned to invokers, etc...

48

AXCP Tools: Rule Editor

Where and how to write, test and execute rules

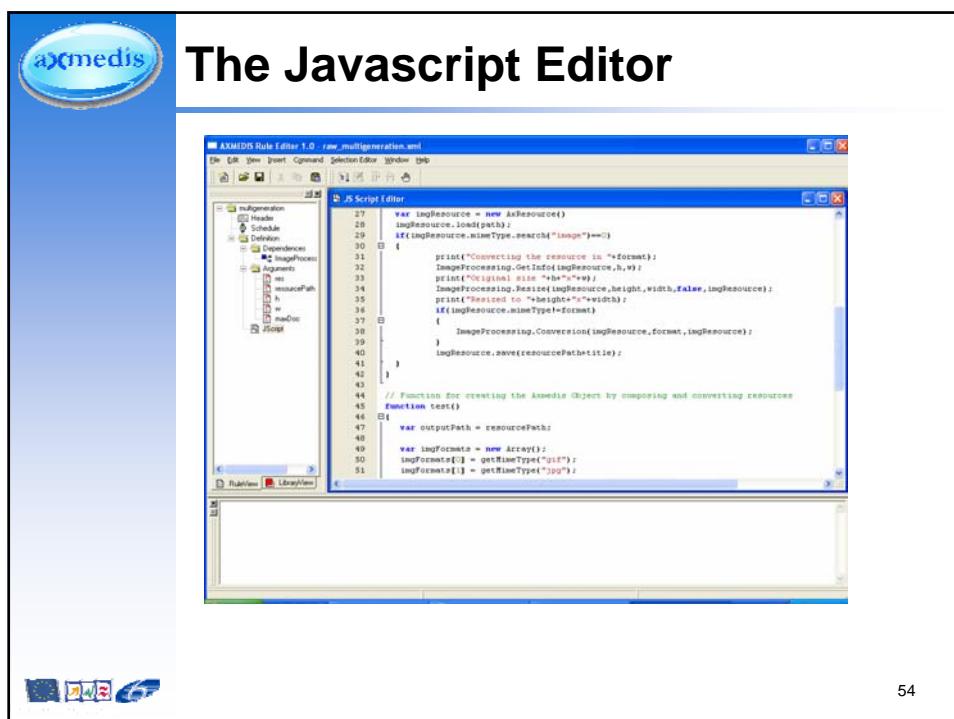

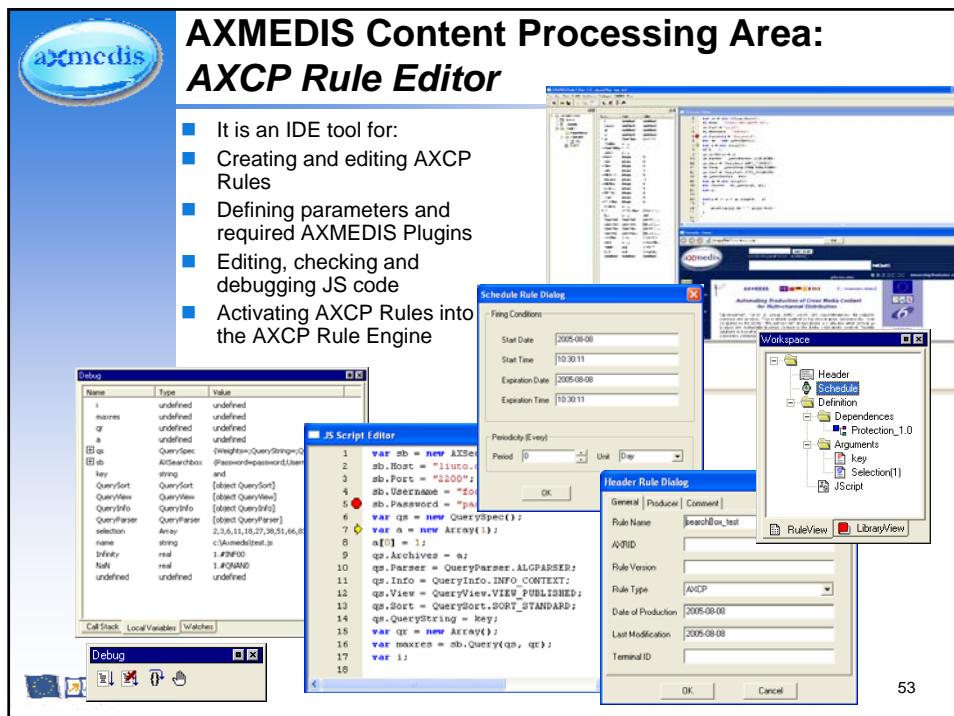

51

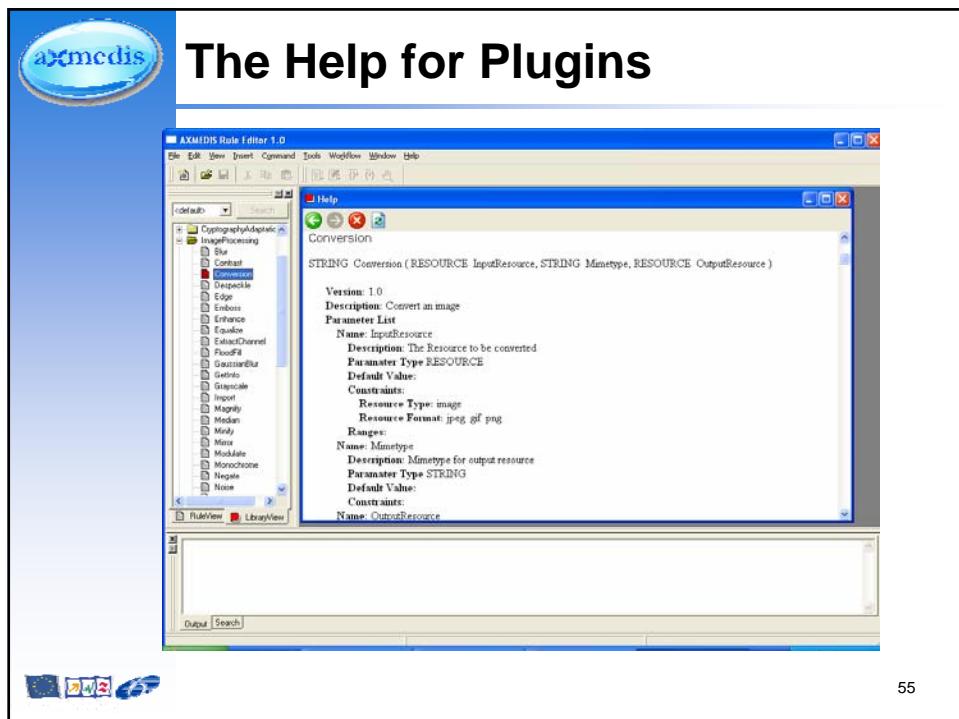

AXCP Rule Editor

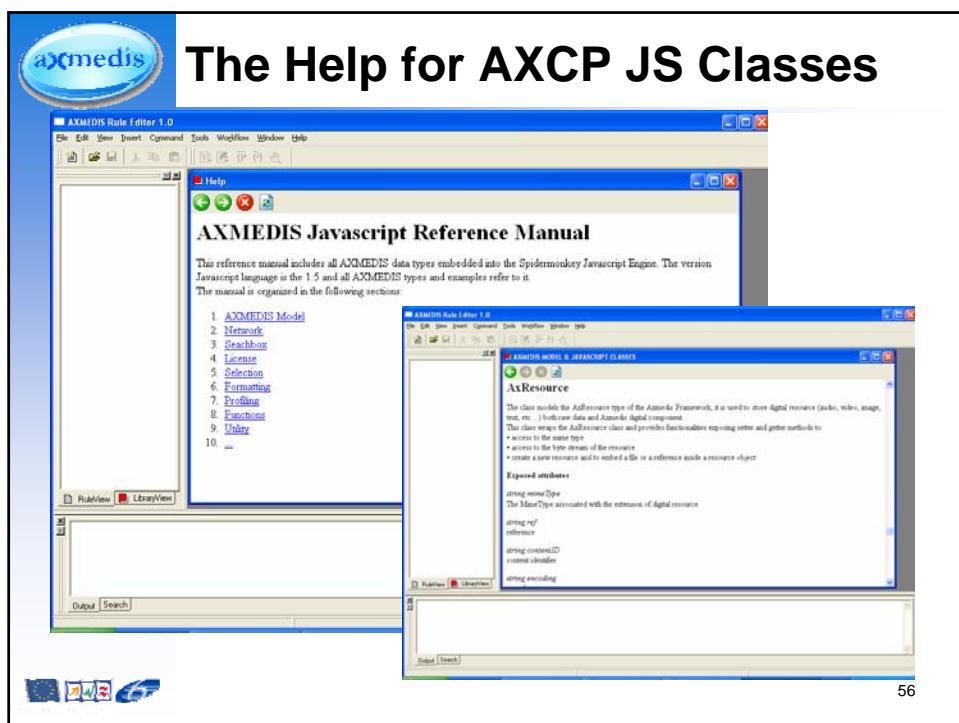

- IDE (integrated development environment) for creating, testing and managing AXCP rules
- Provides a set of tools and views to help the user during the editing and building of rule.
- Integrates the AXCP rule executor in order to provide functionalities for:
 - ▶ executing, debugging, testing and validating
- Provides an online help
 - ▶ Documentation about script functions and classes of the AXCP Script Language.
 - ▶ List of AXCP Plugins and documentation about exposed functionalities

52

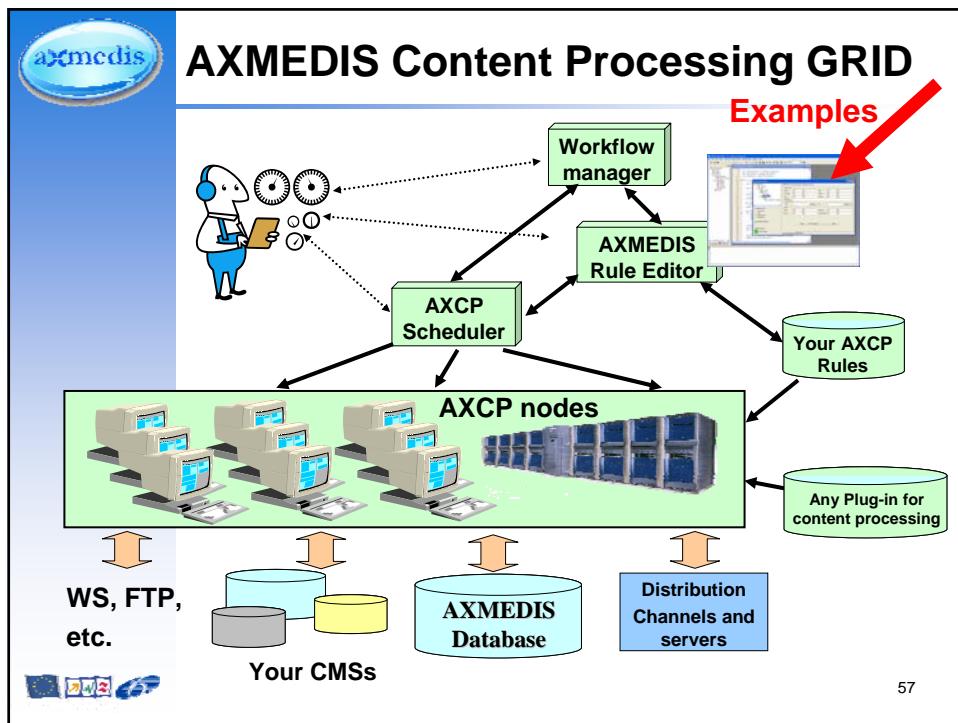

55

56

57

Examples

Using the Available Functionality for Automated Content Processing

58

Simple Rule without parameters

- **Example 1 of the User Manual DE5.0.1.1**
- **Goal:**
 - ▶ Create a simple script for resizing an image resource named AXMEDIS_logo.png stored in the C:\ path and saving the new resized image on the disk.
- **Method:**
 - ▶ Writing and debugging the script
 - ▶ Comparing the original and new to see the result

59

Steps

1. Create an empty digital resource (image)
2. Load the image file into the resource
3. Use the Image Processing plug-in for scaling the image resource
4. Saving the scaled image resource

60

Script Language

```
print("Creating adapted image");
var resource = new AxResource();

resource.load("C:\\\\AXCPToolsDir\\\\resource\\\\axmedis_logo.png");
ImageProcessing.Resize(resource,100,100,false,resource);
print("Resized to 100 x 100");

ImageProcessing.Conversion(resource,"image/jpeg",resource);
resource.save("C:\\\\AXCPToolsDir\\\\output\\\\Example_100_100");
print("End of job");
```

61

Rule Parameters

- **Example 2 of the User Manual DE5.0.1.1**
- **Goals:**
 - ▶ Create a simple script for resizing an image resource stored on file system and saving the new resized image on the disk.
 - ▶ Generalize the previous script inserting some arguments in the script.
 - Location for loading and saving the image
 - Resulting image dimensions
 - Output image format
 - ▶ Obtain a rule that will remain valid and will be not modified in the future.
- **Method:**
 - ▶ Writing and debugging the script

62

Steps

Parameter definition

1. Definition of rules arguments (*input_path*, *output_path*, *width*, *height*, *out_mime_type*)

Parameter usage

2. Create an empty resource
3. Load the image file by the *input_path* argument
4. Use the Image Processing plugin for *scaling* the image
5. Use the Image Processing plugin for *conversion* the image
6. Resulting image is saved in the location specified by the *output_path* argument

63

Script Language

```
print("Creating adapted image");

var resource = new AxResource();

resource.load(inputPath+resourceFileName);

ImageProcessing.Resize(resource,width,height,false,resource);

print("Resized to "+width+" x "+height);

ImageProcessing.Conversion(resource,outFormat,resource);

resource.save(outputPath+"Example");

print("End of job");
```

64

Creating AXMEDIS Objects

- Example 3 of the User Manual DE5.0.1.1
- Goal:
 - ▶ Example 2 (Loading manipulating image resource)
 - ▶ Converting the resource into a different format
 - ▶ Create an AXMEDIS object
 - ▶ Filling metadata
 - ▶ Embedding an image resource
 - ▶ Storing on disk and/or uploading on DB
- Method
 - ▶ Write and debugging the script
 - ▶ Show of the produced AXMEDIS Object with AXEditor

65

Steps:

1. Definition of rules arguments (*input_path*, *output_path*, *width*, *height*, *out_mime_type*)
2. Create an empty resource
3. Load the image file by the *input_path* argument
4. Use the Image Processing plugin for *scaling* the image
5. Use the Image Processing plugin for *conversion* the image
AXMEDIS objects
6. Creating an empty AXMEDIS object
7. Adding meta data and the image resource
8. Save the AXMEDIS object
9. Open the AXEditor for visualisation

66

Script Language

```

print("Creating adapted image");

var resource = new AxResource()

resource.load(inputPath+resourceFileName);

ImageProcessing.Resize(resource,width,height,false,resource);

print("Resized to "+width+" x "+height);

ImageProcessing.Conversion(resource,outFormat,resource);

// Create an empty Axmedis Object
var masterObj = new AxmedisObject();

// Add the resource in the Axmedis Object
masterObj.addContent(resource);

// Retrieve the Dublin Core metadata section from the Axmedis
// Object
var dc = masterObj.getDublinCore();

```

67

Script Language

```

// Start to fill DC elements
dc.addDCElement("creator","AXCP Tool");
dc.addDCElement("title","Demo2");
dc.addDCElement("description","Embedding a resource");

// Store the Axmedis Object on Disk
masterObj.save(outputPath+"Example.axm");

// Defining parameters for accessing to the Axmedis Database
var tempFileName ="";
var AXDBF_saverEndPoint =
    "http://192.168.0.108:8080/LoaderSaverF/save";
var AXDBF_user = "test";
var AXDBF_passwd = "test";
var AXDBF_usingftp = true;
var AXDBF_externalurl = "ftp://192.168.0.108";
var AXDBF_internalurl = "";
var AXDBF_lockEndPoint =
    "http://192.168.0.108:8080/LockUnlockWSF/lockunlock";

// Storing on Axmedis Database
masterObj.uploadToDB(AXDBF_saverEndPoint,AXDBF_user,
    AXDBF_passwd,AXDBF_usingftp,
    AXDBF_externalurl,tempFileName,
    AXDBF_internalurl,AXDBF_lockEndPoint);

print("End of job");

```

68

“Full Round” AXMEDIS Automated Object Production

- **Steps:**
 - ▶ Example 3 (previous example: AXObject creation)
 - Filling metadata
 - Embedding a resource
 - Adapting the resource into a different format
 - ▶ Registering Object
 - ▶ Protecting Object
 - ▶ Creating and storing licenses
 - ▶ Storing on disk and/or uploading on DB
- **Method**
 - ▶ Write and debugging the script
 - ▶ Show of the produced AXMEDIS Object with AXEditor

69

Steps:

<ol style="list-style-type: none">1. Setting of the license related parameters2. Create an empty resource and AXMEDIS object3. Load the resource4. Adding meta data and the resource in the AXMEDIS object	<p style="color: red; font-weight: bold;">DRM operations</p> <ol style="list-style-type: none">5. Save the AXMEDIS object on disk and AXMEDIS database6. Creating licences for distribution7. Creating license for the end user8. Fruition – Using the AXMEDIS object
---	--

70

Script Language (I)

```
// IDs Definition
// Id of the Creator
var AXCID = "URN:AXMEDIS:00001:BUS:00000000-0000-0000-0000-
000000000000";

// Id of the Distributor
var AXDID = "URN:AXMEDIS:00001:BUS:3A2F35F1-5E91-314C-A51A-
D07D75C216C7";

// Id of the Final User
var AXUID = "URN:AXMEDIS:00001:USR:00000000-0002-0000-0000-
000000000000";

// AXCS Client configuration for object definitive AXOID
// request & registration

```

77

Script Language (VIII)

```
// Define the Right
var endRight = new Right();
endRight.setRight("mx:play");

// Setting the resource: the current Axmedis Object
var endRes = new Resource();
endRes.resourceId = AXOID;
endRes.diType = 1;

// Applying Resource and Right to the grant
endGrant.setResource(endRes);
endGrant.setRight(endRight);

// Adding the grant to the Grant Group
endGrantGroup.addGrant(endGrant);
```

78

Script Language (IX)

```
//Creating the issue grant (mx:issue for GrantGroup)
// Defining the mother License
var motherLicense = new License();

// Define the creator of object
var creator = new Issuer();

// Create the distribution Grant Group
var distGrantGroup = new GrantGroup();

// Create the distributor
var distributor = new Principal();

// Create the Resource for the mother license
var distRes = new Resource();
distRes.setGrantGroup(distGrantGroup);
```

79

Script Language (X)

```
var distGrant = new Grant();
// Set the right type for distribution
var distRight = new Right();
distRight.setRight("r:issue");

// Set distributor ID
distributor.setName(AXDID);
distGrant.setPrincipal(distributor);
distGrant.setResource(distRes);
distGrant.setRight(distRight);

distGrantGroup.addGrant(distGrant);

creator.setIssuer(AXCID);
motherLicense.setGrantGroup(distGrantGroup);
motherLicense.setIssuer(creator);
```

80

Script Language (XI)

```
// Retrieve the xml description of Mother license
var mxmllic = motherLicense.getXMLLicense();

// Store the XML on disk
writeToFile(tempDir+"\\"+MLic.xml", mxmllic);

// Posting the mother license
print("Start Posting Mother License on PMS");

// Creating the Client for posting license into the PMS
var pms = new PMSClient(PMSClient_Endpoint,
    PMSClient_Certificate,PMSClient_CertificatePsw,
    PMSClient_CA);

// Sending license to PMS
var res = pms.sendLicense(mxmllic);
print("License posted as "+res+" in the PMS Server");
```

81

Script Language (XII)

```
// Section 4: Creating the enduser license (Child License)
// This license allows the end user associated with AXUID opening
// the Axmedis Object.
// The Issuer is the distributor and Principal is the End User. The
// grant including the right is what has been decided by creator in
// the Mother License
var enduserLicense = new License();
var dist_issuer = new Issuer();

var enduser = new Principal();
enduser.setName(AXUID);
endGrant.setPrincipal(enduser);

dist_issuer.setIssuer(AXDID);

// Set the Grant Group with the right (mx:play)
enduserLicense.setGrantGroup(endGrantGroup);
enduserLicense.setIssuer(dist_issuer);
```

82

Script Language

```
// Retrieve the xml description of the end use license  
var exmllic = enduserLicense.getXMLLicense();  
  
// Store the XML on disk  
writeToFile(tempDir+"\\"+ELic.xml", exmllic);  
  
//Using the same PMSClient for sending the end user license  
var res = pms.sendLicense(exmllic);  
print("License posted as "+res+" in the PMS Server");  
  
return true;  
}  
  
var result = createAxmedisObject();
```

83

Automated Content Processing

■ What you have seen

- ▶ What is a rule and what can be done with it?
- ▶ Writing a rule in the AXCP Rule Editor for automated content processing?
- ▶ How to execute and testing a rule in the AXCP Rule Editor?

■ Next:

- ▶ Extended functionalities for content processing

84

Which further functionalities are available?

Extended functionalities provided by the AXMEDIS
Framework for Automated Content Processing

85

Examples: Extended Functionalities

- Content Description and Meta Data Creation
- Meta Data Mapping
- Adaptation and Transcoding
- Content Authentication

86

Content Description and Meta Data Creation

- Automatic extraction/calculation of
 - ▶ Low Level Descriptors (LLDs)
 - ▶ Perceptual Hashes/Content Fingerprints
 - ▶ High Level Descriptors (LLDs)
- List of available functionalities
 - ▶ Audio - LLDs
 - MPEG-7 AudioWaveform
 - MPEG-7 AudioPower
 - MPEG-7 AudioSpectrumEnvelope
 - MPEG-7 AudioSpectrumCentroid
 - MPEG-7 AudioSpectrumSpread
 - MPEG-7 AudioSpectrumFlatness
 - Mel-Frequency Cepstrum Coefficients

87

Content Description and Meta Data Creation (II)

- Continued list of available functionalities
 - ▶ Audio – HLDs
 - Rhythm
 - Audio File Segmentation
 - Music Genre
 - ▶ Video
 - Basic Integration of MPEG-7 reference implementation
 - ▶ Text
 - Language Guesser
 - Keyword Extraction

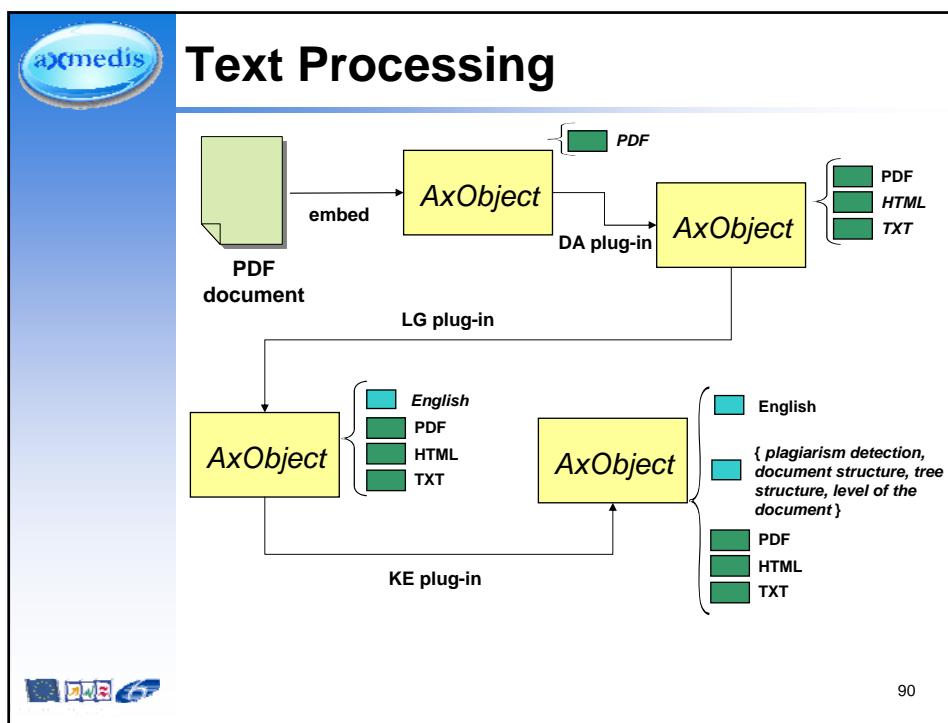

88

Demonstration: Text processing

- **Document Adaptation (DA)**
 - ▶ transcoding between various text formats (PDF, HTML, Postscript, RTF, plain text)
- **Language guesser (LG)**
 - ▶ Retrieving the main language from a plain text document
- **Keyword extractor (KE)**
 - ▶ Extraction of mono-term and multi-term keywords from an plain text (English, Italian, German, Spanish and French, only English is implemented so far)
- **Automatically extracted descriptors can be used to fill AXMEDIS objects metadata, allowing better search results.**

89

Steps

- 1. Loading resource**
- 2. Transcoding to HTML**
- 3. Embedding the HTML resource in the object**
- 4. Transcoding to plain text**
- 5. Embedding the plain text resource in the object**

91

Text Processing Script (I)

```
// path where the data is stored
var path="C:\\axmedis\\\";

// loading raw resource - PDF
var pdfRes = new AxResource();
pdfRes.load(path + "Zini-et-al_AXMEDIS2006.pdf");

// embedding the resource in a new object
var obj = new AxmedisObject();
obj.addContent(pdfRes);

// Document Adaptation
// 1. Transcoding to HTML
var htmlRes = new AxResource();htmlRes.contentID =
"HTMLResource";TextDocsAdaptation.DocumentConversion(pdfRes,"text/html",htmlRes);

// 2. Embedding the HTML resource in the object
obj.addContent(htmlRes);
var textRes = new AxResource();
textRes.contentID = "PlainTextResource";

// 3. Transcoding to plain text
TextDocsAdaptation.DocumentConversion(pdfRes,"text/plain",textRes)
;

// 4. Embedding the plain text resource in the object
obj.addContent(textRes);
```

92

Text Processing Script (II)

```
// Language Guessing
// 5. Guessing resource language
var language = new Array(1);
language[0]="";
LanguageGuesser.LanguageGuesser(textRes,language);

// 6. Adding language to Dublin Core metadata
var dublinCore = obj.getDublinCore();
dublinCore.addDCElement("language", language[0]);

// Keyword Extraction
// 7. Retrieving keywords
var keywords = new Array(1);
keywords[0]++;
TextDescriptors.KWFromComparisons(textRes,4,false,keywords);
var commaSepKeywords = keywords[0].replace(/[\n\r]+/g, ", ");
commaSepKeywords = commaSepKeywords.replace(/\_{3}/g, " ");

// 8. Adding keywords to Dublin Core metadata
dublinCore.addDCElement("subject", commaSepKeywords);

// 9. saving object to file
obj.save(path + "textproc.axm");
true;
```

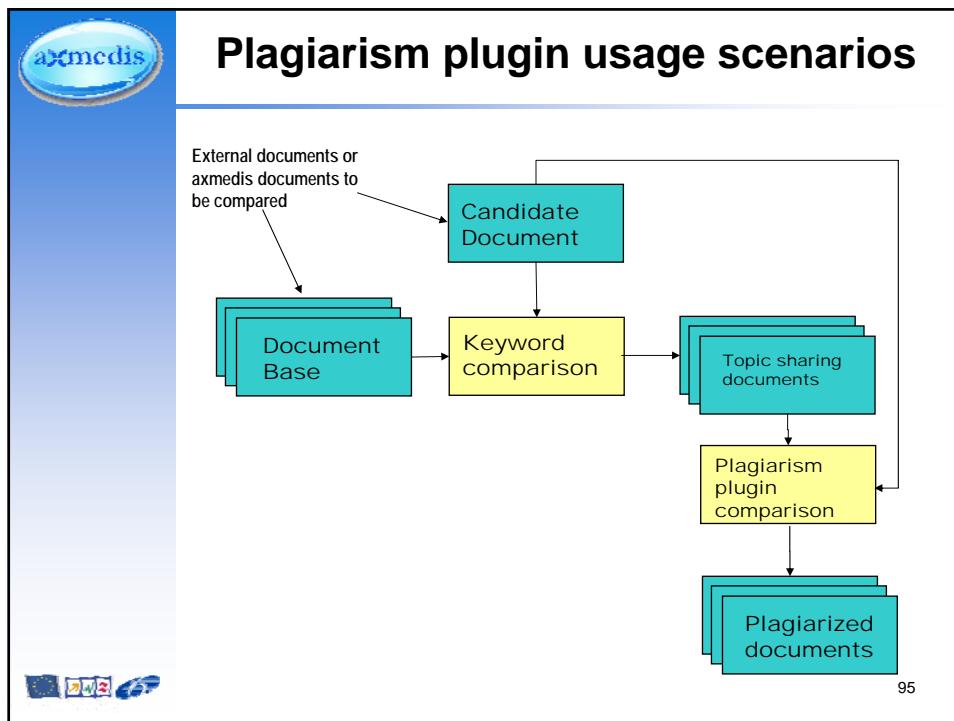

93

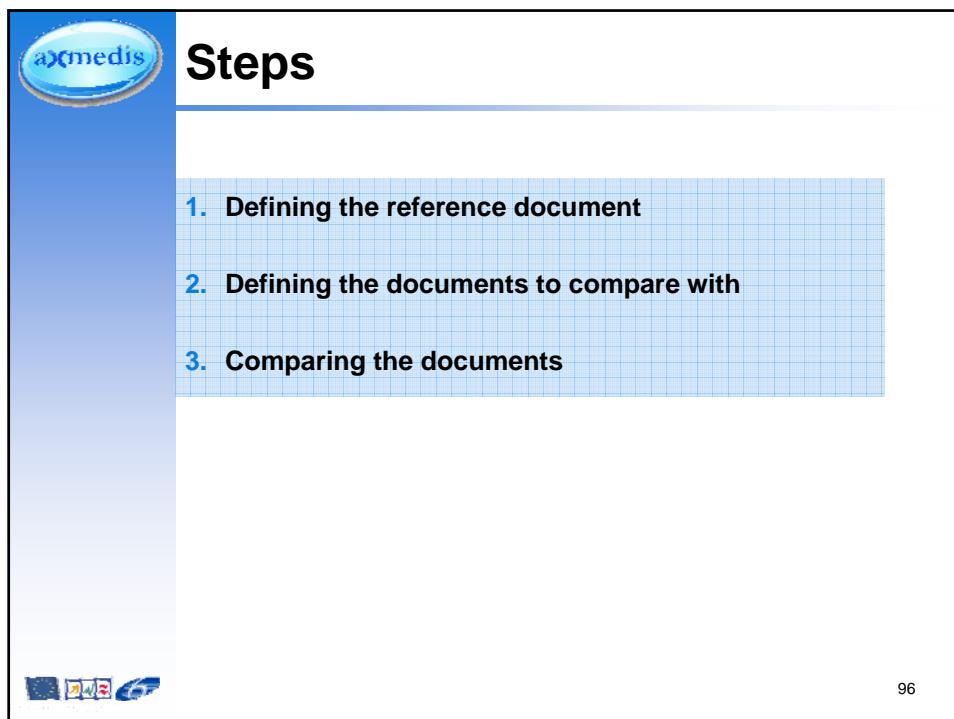

Plagiarism detection plug-in

- **Detection of plagiarism behaviour: plagiarism between two textual documents**
- **Basic model: a set of modifications (insertion, deletion, substitution) performed**
- **Return value: normalised similarity value**
- **Can be combined with other tools, e.g. keyword extractor**

94

95

96

Plagiarism Detection Script

```
var path="c:\\axmedis\\"
var originalName = "original.txt";
var txtFilesArray = getAllFiles(path,"*.txt");
var threshold = 0.3;var i=0;var resources = new
Array(txtFilesArray.length);

for (i in txtFilesArray) {

    var originalRes = new AxResource();
    originalRes.load(path + "original.txt");

    resources[i] = new AxResource();
    resources[i].load(txtFilesArray[i]);

    var score = Plagiarism.Compare(originalRes, resources[i]);

    if (score < threshold) {
        print(originalName + " <--> " + txtFilesArray[i].substring (
            txtFilesArray[i].lastIndexOf("\\") + 1 ,
            txtFilesArray[i].length ) + " --> Test OK");
    } else {
        print(originalName + " <--> " + txtFilesArray[i].substring (
            txtFilesArray[i].lastIndexOf("\\") + 1 ,
            txtFilesArray[i].length ) + " --> WARNING!!!
Score is: " + score);
    }
}
true;
```

97

Adaptation and Transcoding

- Transcoding to and from numerous formats
- Supported media types:
 - ▶ Audio
 - ▶ Images
 - ▶ Text
 - ▶ Video
- Metadata Adaptation
- Rights Information Adaptation
 - ▶ Licenses: MPEG-21 ↔ OMA
- Dynamic Transcoding
 - ▶ See: Workflow Tutorial, today, starting 2pm

98

Audio Adaptation

- **Goal:**
 - ▶ Genre detection (only possible with WAVs)
- **Steps**
 - ▶ Loading the input resource (MP3 format)
 - ▶ Converting the input resource to WAV
 - ▶ Apply a genre detection
 - ▶ Output: genre

99

Adaptation Script

```
// two resources are needed for the transcoding
var res = new AxResource();
var res2 = new AxResource();

// loading the input resource (MP3)
res.load("C:\\\\axmedis\\\\uforobot.mp3");

// converting the input resource to WAV
RingtoneAdaptation.convert_to_WAV(res,res2);

// apply a genre detection
var genre = AudioDescriptor.MusicGenreRecognition(res2);

// output: genre
print(genre);
```

100

Meta Data Mapping

- **Manages**
 - ▶ Generic, AXInfo and DublinCore Metadata
- **Provides functionalities for**
 - ▶ Extracting Metadata from an AXMEDIS Object
 - ▶ Adapting Metadata
 - Loading adaptation style sheet
 - Transforming extracted metadata
 - ▶ Embedding the transformed metadata into an AXMEDIS Object

101

Steps

1. Open AXMEDIS object
2. Initialize the Metadata Mapper
3. Extract the Metadata from the AXMEDIS object
4. Load the saved XSLT file from the disk
5. Transform the metadata producing the new Metadata
6. Embed the new metadata into an AXMEDIS Object
7. Save the AXMEDIS Object

102

Metadata Mapper Script

```
function main()
{
    // Open AXMEDIS object
    var axom = new AxmedisObject("C:\\\\axmedis\\\\tiscali-medioclub-dottor-
mabuse.axm");

    // Initialise the Metadata Mapper
    var mdm = new MetaDataMapper();

    // Extract the Metadata from the AXMEDIS object
    var extractedString = mdm.ExtractMetadata(axom);

    // Load the saved xslt file
    mdm.LoadXSL("C:\\\\axmedis\\\\tiscali-test-style2.xsl");

    // Transform the metadata returning the new metadata string
    var out = mdm.Transform(extractedString);

    // Embed the new metadata into an axmedis object
    mdm.EmbedMetadata(axom, out);

    // Save AXMEDIS object
    axom.save("C:\\\\axmedis\\\\tiscali-medioclub-dottor-mabuse-adapted.axm")
    return 0;
}

// entry point
main();
```

103

Content Authentication

- **Cryptographic Hash Functions**
 - ▶ All kind of content
- **Perceptual Hash Functions**
 - ▶ Audio
 - ▶ Images
 - ▶ Video

104

Further Functionalities

- I/O functions
- File and directory access
- Profiling of devices, distribution channels and users
- Network access: FTP, HTTP, ODBC, webservices, ...

105

Summary

- Why to automate content processing processes
- Automated content processing in AXMEDIS
 - ▶ Writing, executing and debugging rules
 - ▶ Available functionality
 - ▶ Examples for using the available functionality

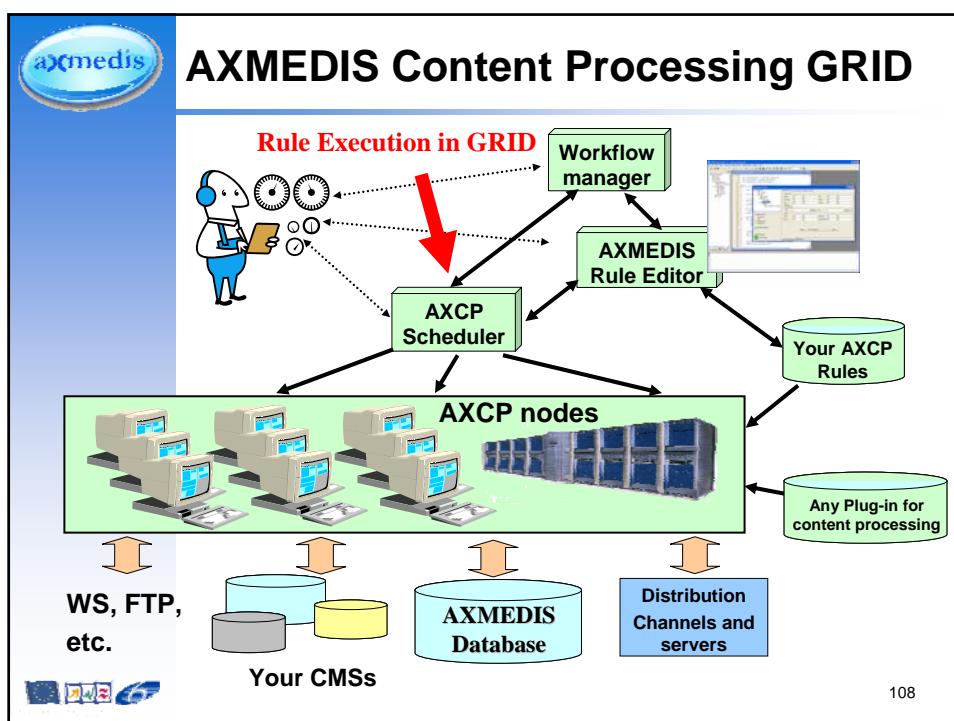

106

**AXMEDIS Tutorial
on Content Processing - Part II**

- AXCP Rule Scheduler
- AXCP GRID
- Complex Scenarios
- Summary and Conclusion
- Discussion, Questions and Answers

107

AXCP Rule Engine

Managing the Rule Execution in the AXMEDIS Grid

109

AXCP Rule Engine

- **Consists of**
 - ▶ Rule Scheduler (Server Side)
 - ▶ Rule Remote Executor (Client Side): AXCP GRID Node
- **Rule Scheduler: Internal Scheduler and Dispatcher for**
 - ▶ rule installation
 - ▶ rule firing
 - ▶ rule executor discovering and management
 - ▶ rules scheduling and dispatching according to the executor profile
 - ▶ communication with the AXMEDIS environment (workflow)
 - ▶ ...
- **Rule Remote Executor**
 - ▶ Consisting of the same JavaScript engine

110

AXCP Scheduler: Functionalities

- Install & Activate a Rule in AXCP Grid
- Run a Rule in AXCP Grid
- Deactivate a Rule
- Suspend a Rule
- Pause a running Rule
- Resume a previously suspended Rule
- Kill a Rule immediately
- Remove a Rule from the AXCP Grid
- Determine the Status for any Rule in the Grid
- Retrieve the Logs for any Rule in the Grid
- Retrieve the List of Rules in the Grid
- Retrieve a particular Rule in the Grid

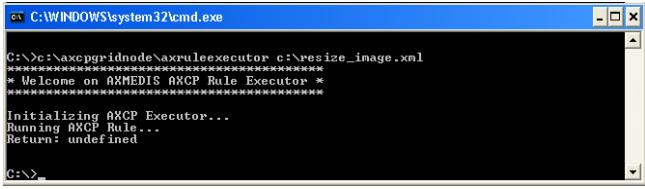

→ manually or with a remote client (e.g. workflow)

111

Remote Rule Executor

- Application
 - ▶ Standalone
 - 
 - ▶ Node of the GRID
- Properties
 - ▶ CPU Monitoring
 - ▶ CPU Workload Constraints
 - ▶ Communication with the Scheduler (GRID Node)

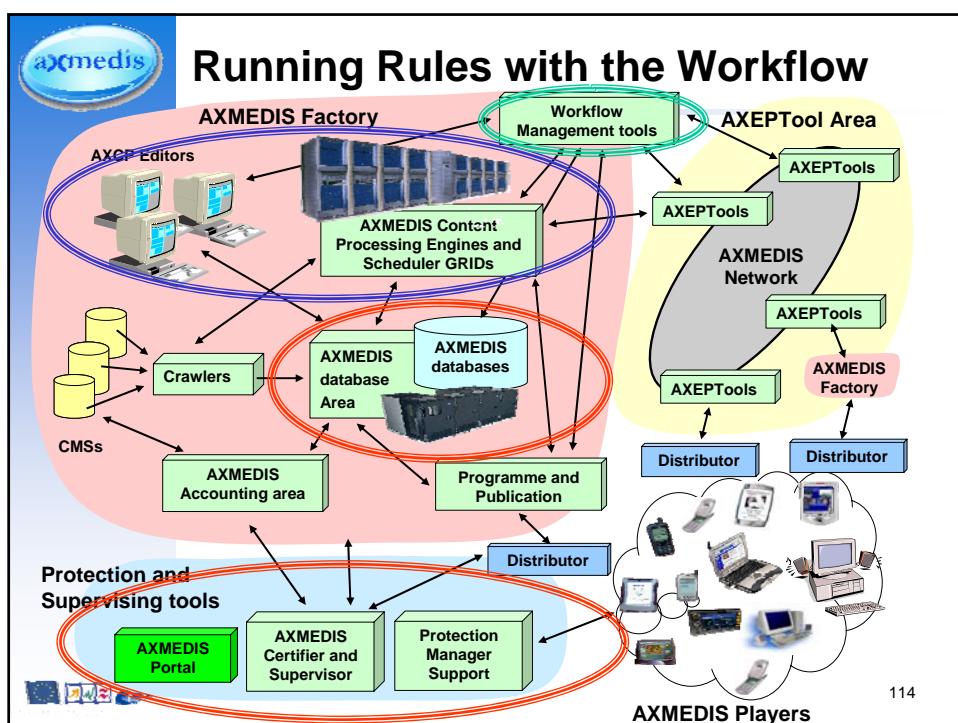

112

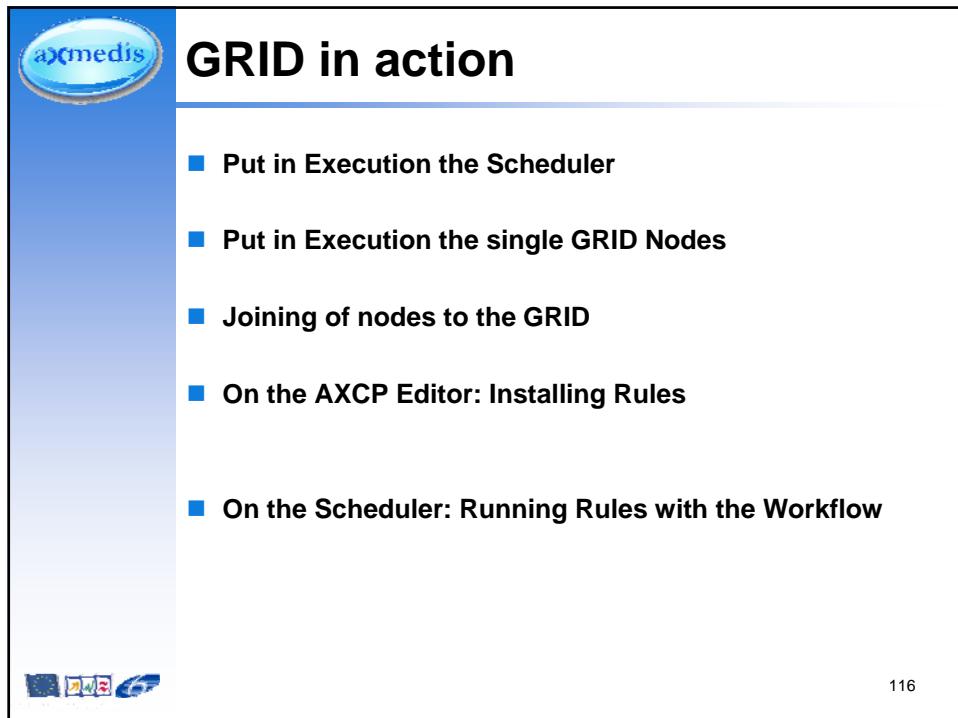

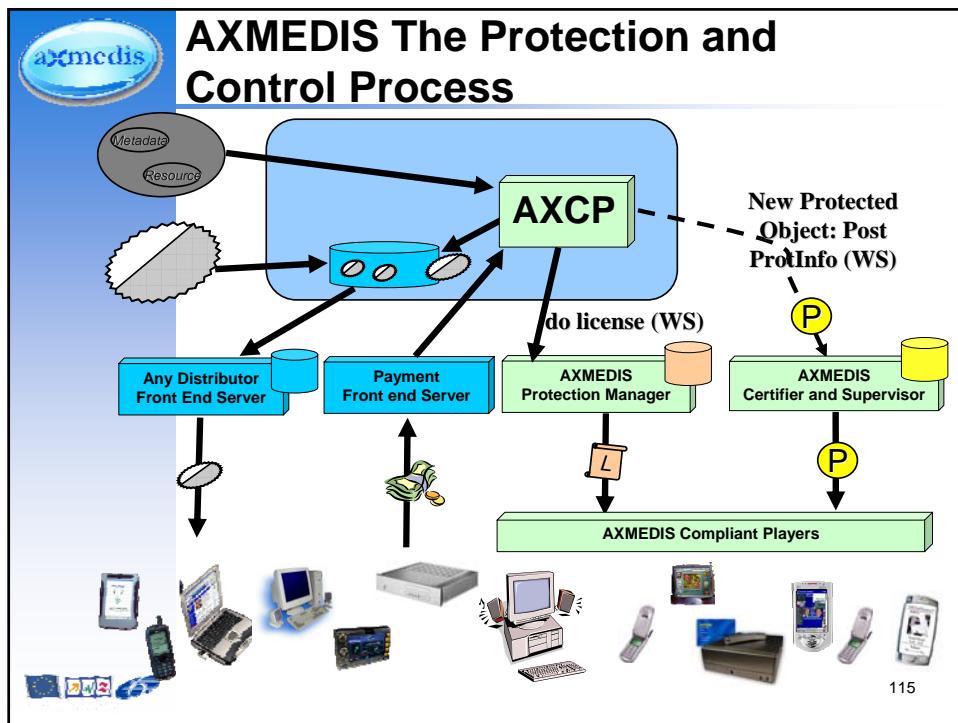

AXCP GRID Node

■ Workload setting (see configuration.xml)

```
<Module category="" id="WORKLOAD_SETTINGS">
  <Parameter name="MON" type="string">
    0;0;0;0;0;30;50;30;30;20;30;45;50;20;30;45;50;30;30;0;0;0
  </Parameter>
  <Parameter name="TUE" type="string">
    0;0;0;0;0;30;30;20;30;45;50;20;30;45;50;30;30;0;0;0
  </Parameter>
  <Parameter name="WED" type="string">
    0;0;0;0;0;30;50;60;20;30;45;50;20;30;45;50;30;30;0;0;0
  </Parameter>
  <Parameter name="THU" type="string">
    0;0;0;0;0;60;60;20;30;45;50;20;30;45;50;30;30;0;0;0
  </Parameter>
  <Parameter name="FRI" type="string">
    0;0;0;0;0;50;50;50;20;30;45;50;20;30;45;50;30;30;0;0;0
  </Parameter>
  <Parameter name="SAT" type="string">
    0;0;0;0;0;50;50;50;20;30;45;50;20;30;45;50;30;30;0;0;0
  </Parameter>
  <Parameter name="SUN" type="string">
    0;0;0;0;0;50;50;30;70;20;30;45;50;20;30;45;50;30;30;0;0;0
  </Parameter>
</Module>
```

113

Discovered AXCP GRID Node

The screenshot shows a terminal window titled "Collegamento a axcpgridnode.exe". The window displays the following text:

```
*****
* Welcome on AXMEDIS AXCP GRID NETWORK *
*****  
Initializing AXCP GRID NODE  
-> Starting GRID peer functions...  
-> GRID peer functions started  
-> GRID Gpu Monitor started  
AXCP GRID NODE Ready  
Connected to AXCP Scheduler <192.168.0.191>  
Profile request by 192.168.0.191  
Profile sent to 192.168.0.191
```

At the bottom of the window, there is a scroll bar.

Below the window, there is a toolbar with icons for file operations and a status bar showing the number 117.

Installing Rules

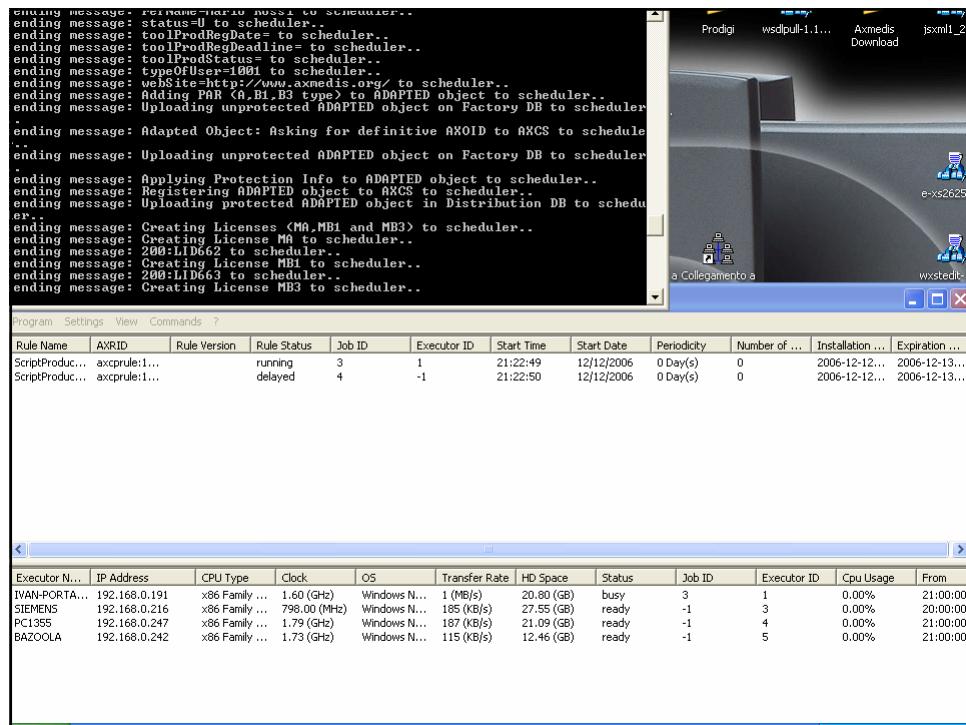

- Manually using the scheduler

A context menu is displayed with the following options:

Action	Ctrl+A
Launch scheduler	Ctrl+L
Stop Scheduler	Ctrl+S
Backup	Alt+B
Restore	Alt+R
Minimize	Alt+M
Exit	Alt+X
Start Grid Peer functions	Ctrl+F
test replace parameters	
test replace schedule	
test install whole rule as string	
test replace parameters and schedule	

- Installing rules with the AXCP Editor
 - ▶ Script for Automated Production of content and production of licenses
- Activating rule using external application
 - ▶ AXCP Rule Editor, Workflow, ...
 - ▶ Workflow is activating them
- Running a rule
 - ▶ On-demand execution

At the bottom of the slide, there is a toolbar with icons for file operations and a status bar showing the number 118.

Massive Production of AXObjects

Distributed workload

- ▶ Steps
 1. Loading raw resources from file system
 2. Content adaptation
 3. Content protection
 4. Posting protection information on AXCS
 5. DRM Licensing:
 1. Production of Mother license for distribution
 2. Posting of licenses on the PMS
 3. Production of some final user licenses only for adapted objects
 4. Posting of licenses on the PMS
 6. Distribution
- ▶ Results
 1. Master Version (protected and unprotected)
 2. Adapted Objects (protected and unprotected)

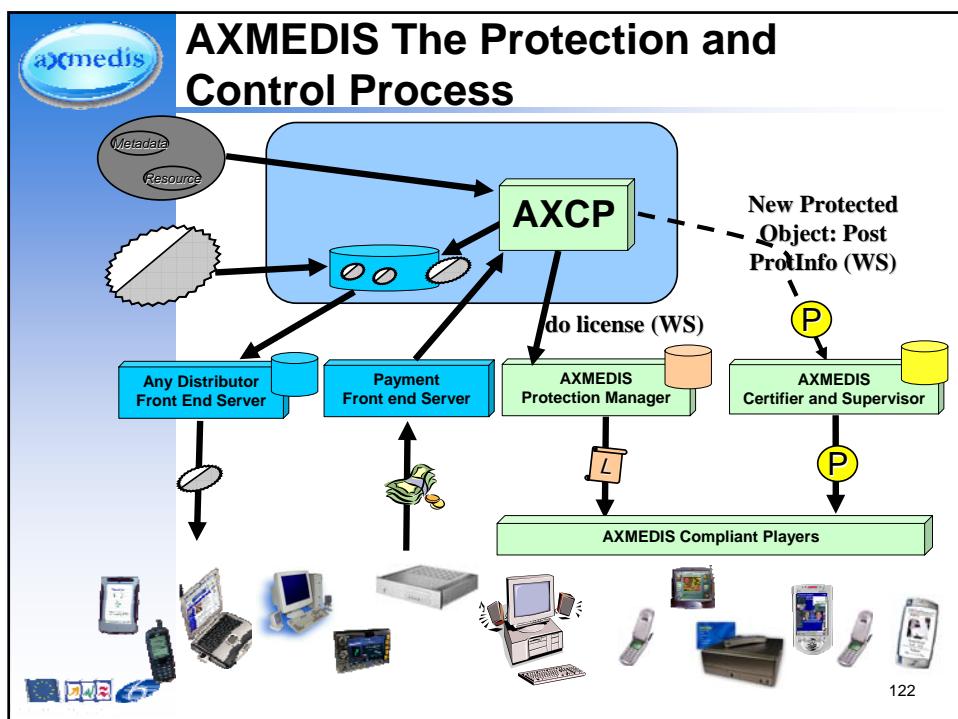

120

What is produced

- Some Different GRID nodes
 - ▶ only two of them have capabilities to manage the rules in terms of plugins installed
- Two rules activated on two different nodes
- The rules work on some resources
 - ▶ a PDF is adapted to produce two objects in TXT and HTML
 - ▶ From an MP3 is produced an object
 - ▶ A wav file is adapted to produce an object with an MP3
 - ▶ From images in different formats, some adaptation resizing are performed
- More than 30 AXMEDIS objects are created

 121

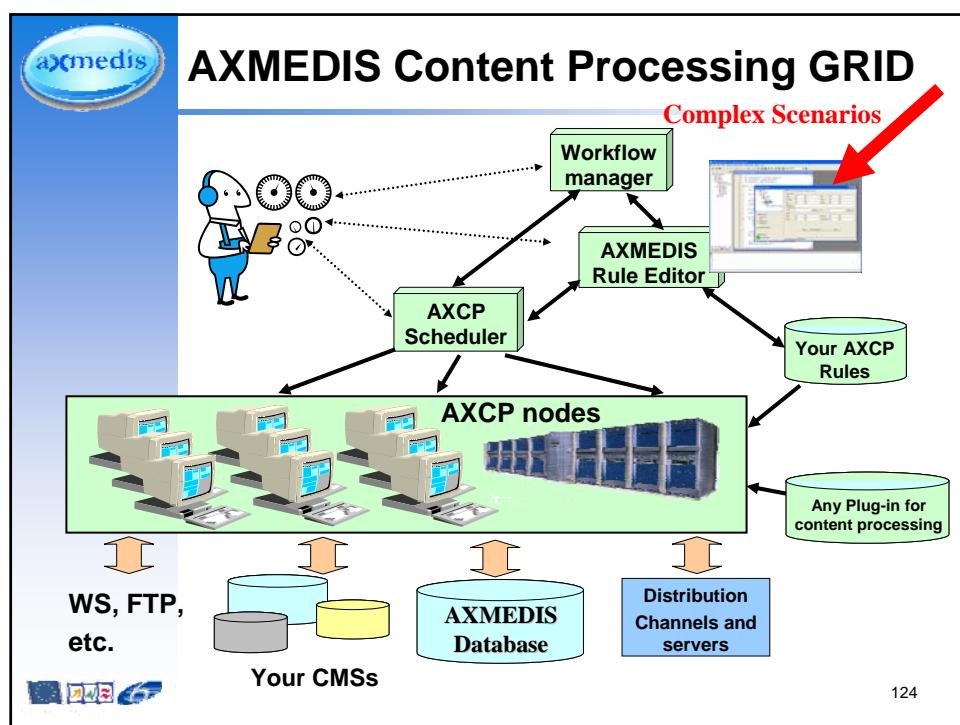

Complex Scenarios

Real Scenario taken from
Accademia Nazionale di Santa Cecilia

123

Complex Scenarios

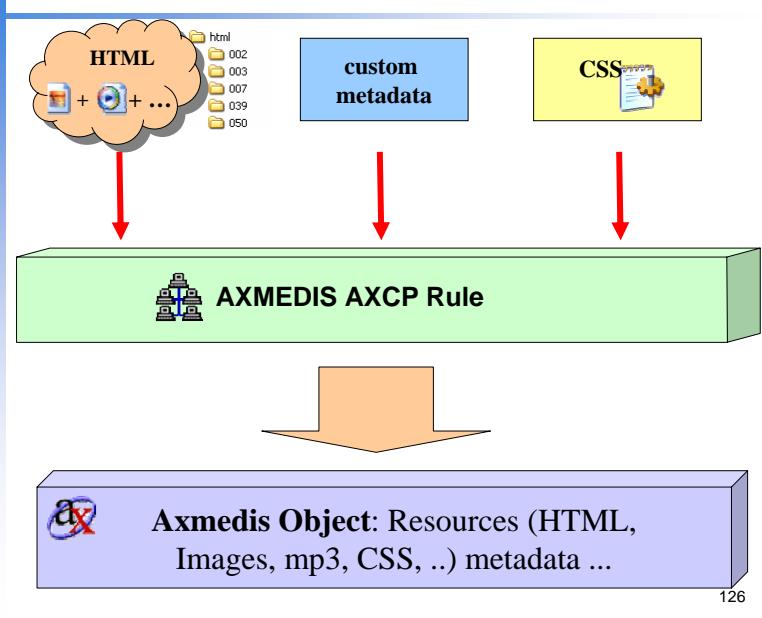

- Accademia Nazionale di Santa Cecilia,
<http://www.santacecilia.it>

ACCADEMIA NAZIONALE
DI SANTA CECILIA
Fondazione
- Examples:
 - ▶ Content gathering from file system
 - ▶ Crawling from CMS using SearchBox Tool
 - ▶ Automatic SMIL representation

 125

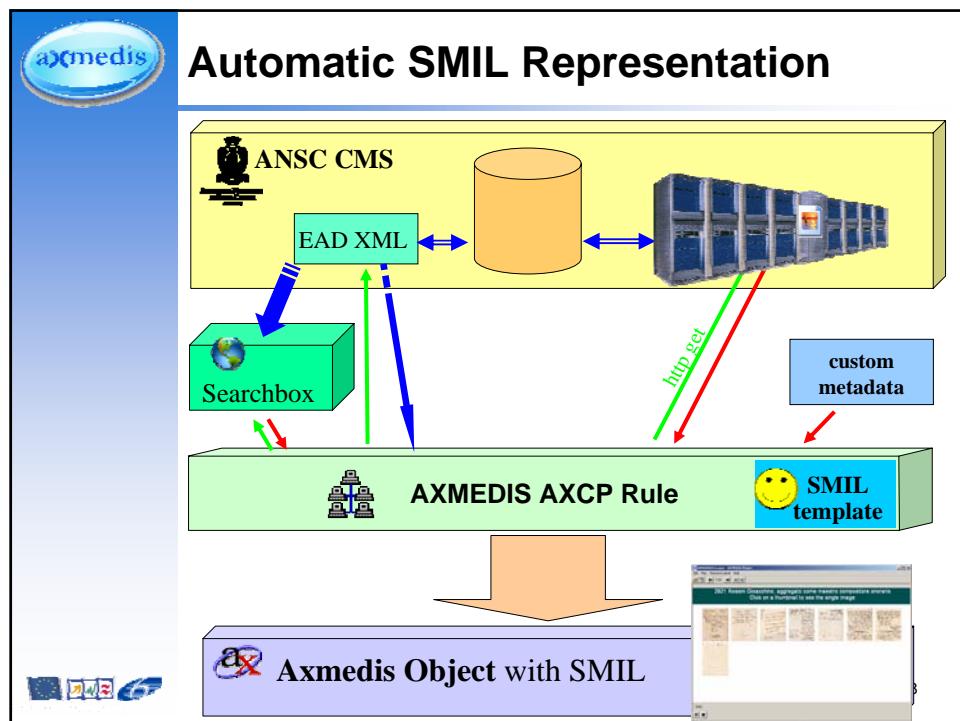

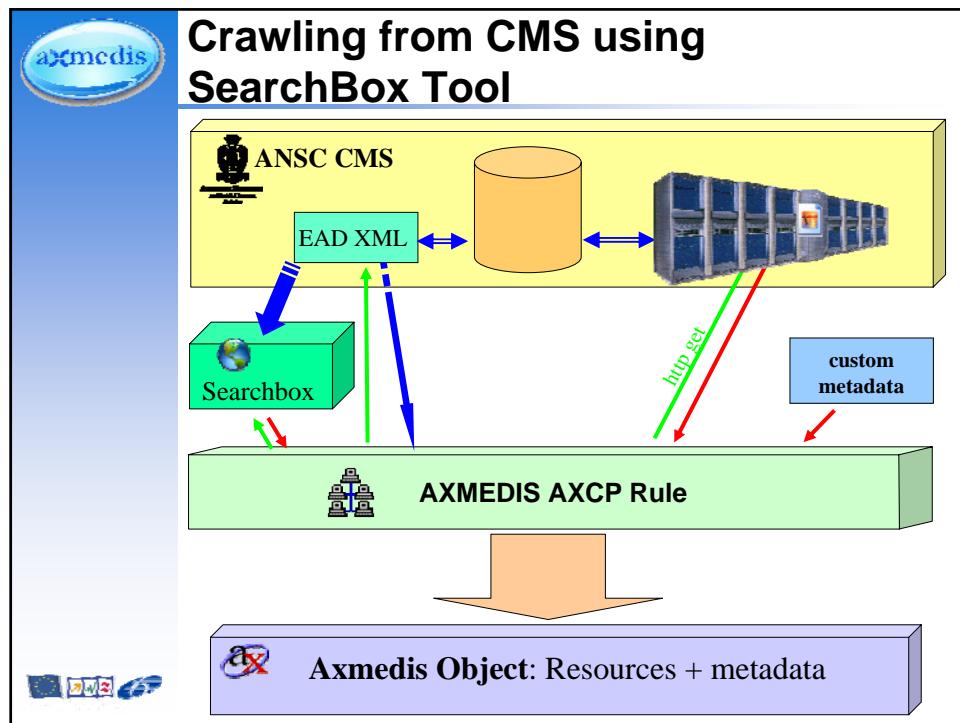

Content gathering from file system

The diagram illustrates the process of content gathering from a file system. It shows three input components: an orange cloud labeled "HTML" containing icons for files, databases, and other resources; a blue box labeled "custom metadata"; and a yellow box labeled "CSS". Red arrows point from each of these three boxes down to a green rectangular box labeled "AXMEDIS AXCP Rule". A large orange arrow points down from the AXCP Rule box to a blue rectangular box labeled "Axmedis Object: Resources (HTML, Images, mp3, CSS, ..) metadata ...".

 126

Summary

- Rules Definition, test and validation
- Rules installation and Execution
- Rules Scheduling
- AXMEDIS GRID management

129

Adding Your Plugins

- Flexible Plugin Interface already used to integrate the extended functionality
- Examples:
 - ▶ ImageMagick,
 - ▶ FFMPEG,
 - ▶ CryptLib,
 - ▶ MPEG-7 reference implementation,
 - ▶ ...
- External tools
 - ▶ M2ANY: AudioID (integrated)
 - ▶ ISHCE: Audio Watermarking (under development)

130

Conclusions

- The AXMEDIS Scripting Language provides a flexible solution for automatic content processing.
- The AXMEDIS Core Functionality provides the basic method for the management of digital content and corresponding rights.
- External Functionality included in AXMEDIS enriches the basic functionality to cover daily tasks.
- The AXMEDIS GRID allows a dynamic load balancing.
- The extensibility of the AXMEDIS Framework provides the flexibility for future scenarios:
 - ▶ scripting and creation of new AXMEDIS plugins.

131

Conclusions

- AXMEDIS reduces costs for content management by providing a solution for automating the content processing, production, protection and distribution.
- AXMEDIS reduces distribution and aggregation costs in order to increase accessibility with a
 - ▶ Peer-to-Peer platform at Business-to-Business level
 - ▶ Integration of content management systems
 - ▶ Integration of workflows
